

## TPD4E1B06 4-Channel Ultra Low Leakage ESD Protection Device

### 1 Features

- Ultra Low Leakage Current 0.5 nA (Max)
- Transient Protection for 4 I/O Lines
  - IEC 61000-4-2 Contact Discharge  $\pm 12$  kV
  - IEC 61000-4-2 Air-Gap Discharge  $\pm 15$  kV
  - IEC 61000-4-5 Surge 3.0 A (8/20  $\mu$ s)
- I/O Capacitance 0.7 pF (Typ)
- Bi-directional TVS Diode Array
- Low ESD Clamping Voltage
- Industrial Temperature Range:  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$
- Small, Easy-to-Route DRL and DCK Packages

### 2 Applications

- Glucose Meter
- Tablets
- GPS
- Portable Media Players
- TV
- Set-top Box

### 4 Simplified Schematic

### 3 Description

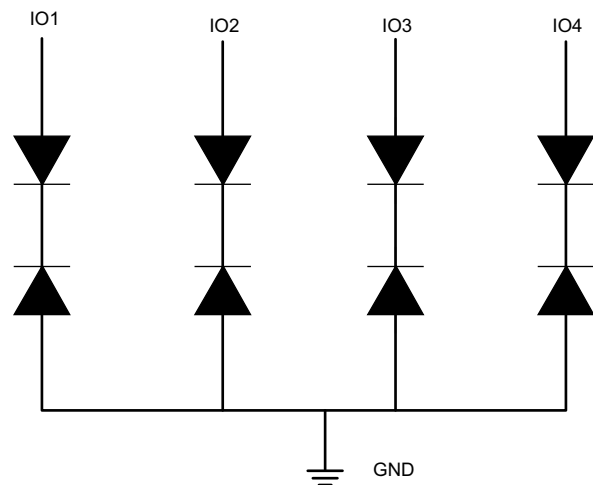

The TPD4E1B06 is a 4-channel bi-directional Transient Voltage Suppressor (TVS) diode array. This device features ultra low leakage current (0.5 nA) for precision analog measurements. The  $\pm 12$  kV contact and  $\pm 15$  kV air gap ESD protection exceeds IEC 61000-4-2 level 4 requirements. The TPD4E1B06's 0.7 pF line capacitance makes it suitable for precision analog, USB2.0, Ethernet, SATA, LVDS, and 1394 interfaces.

## 8 Detailed Description

### 8.1 Overview

The TPD4E1B06 is a 4-channel bi-directional Transient Voltage Suppressor (TVS) diode array. This device features ultra low leakage current (0.5 nA) for precision analog measurements. The  $\pm 12$  kV contact and  $\pm 15$  kV air gap ESD protection exceeds IEC 61000-4-2 level 4 requirements. The TPD4E1B06's 0.7 pF line capacitance makes it suitable for precision analog, USB2.0, Ethernet, SATA, LVDS, and 1394 interfaces.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The TPD4E1B06 is a 4-channel bi-directional Transient Voltage Suppressor (TVS) diode array. This device features ultra low leakage current (0.5 nA) for precision analog measurements. The  $\pm 12$  kV contact and  $\pm 15$  kV air gap ESD protection exceeds IEC 61000-4-2 level 4 requirements. The TPD4E1B06's 0.7 pF line capacitance makes it suitable for precision analog, USB2.0, Ethernet, SATA, LVDS, and 1394 interfaces.

#### 8.3.1 Ultra low Leakage Current 0.5 nA (Max)

TPD4E1B06 ultra-low leakage current supports long battery life and allows for precision analog measurements.

#### 8.3.2 Transient Protection for 4 I/O Lines

The four I/O pins of TPD4E1B06 can withstand ESD events up to  $\pm 12$  kV contact and  $\pm 15$  kV air gap per IEC61000-4-2.

#### 8.3.3 I/O Capacitance 0.7 pF (Typ)

TPD4E1B06 I/O pins present an ultra-low 0.7 pF capacitance to the protected signal lines, making it suitable for a wide range of applications.

#### 8.3.4 Bi-directional TVS diode array

TPD4E1B06 diode array structure uses back to back diode topology to accommodate bi-directional signaling between  $-5.5$  V and  $5.5$  V.

#### 8.3.5 Low ESD Clamping Voltage

TPD4E1B06 clamps ESD events to a safe level to protect system components.

### 8.4 Device Functional Modes

TPD4E1B06 is a passive integrated circuit that activates whenever fast transient voltages above  $V_{BR}$  or below  $-V_{BR}$  are present on the circuit being protected. During ESD events, voltages as high as  $\pm 12$  kV can be directed to ground via the internal diode network. Once the voltages on the protected line fall below the trigger levels of TPD4E1B06 (usually within 10's of nano-seconds) the device reverts to passive.

## 9 Application and Implementation

### 9.1 Application Information

TPD4E1B06 is a TVS diode array which is typically used to provide a path to ground for dissipating ESD events on hi-speed signal lines between a human interface connector and a system. As the current from ESD passes through the TVS diode, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low  $R_{DYN}$  of the triggered TVS holds this voltage,  $V_{CLAMP}$ , to a safe level to the protected IC.

### 9.2 Typical Application

**Figure 9. Protecting a Pair of Bi-Directional Differential Data Lines**

The typical application of the TBD4E1B06 is to be placed in between the connector and the system. The low capacitance of the TBD4E1B06 gives flexibility in the end application, as it can be used on many different high speed interfaces.

#### 9.2.1 Design Requirements

**Table 1. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Signal range on IO1, IO2, IO3, IO4 Pins	–5.5 V to 5.5 V
Operating frequency	1.7 GHz

#### 9.2.2 Detailed Design Procedure

The designer needs to know the following:

- Signal range on all the protected lines
- Operating frequency

##### 9.2.2.1 Signal Range on IO1, IO2, IO3, and IO4 Pins

TPD4E1B06 has 4 protection channels for signal lines. Any I/O will support a signal range of –5.5 V to 5.5 V.

##### 9.2.2.2 Operating Frequency

The 0.7 pF capacitance of each I/O channel supports data rates up to 3.4 Gbps.

### 9.2.3 Application Curves

## 10 Layout

### 10.1 Layout Guidelines

- Place the device as close to the connector as possible.
  - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
  - The PCB designer should minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
  - Electric fields tend to build up on corners, increasing EMI coupling.

### 10.2 Layout Examples

Figure 11 shows a layout example for the TPD4E1B06DCK. Pins 1 & 2 and 4 & 5 are routed differentially. Pin 3 is routed to the ground plane. Pin 6 does not have an internal connection in the device and does not need to be routed anywhere on the board. It is also acceptable to connect pin 6 to the ground plane.

Figure 12 shows a layout example for the TPD4E1B06DRL. Pins 1 & 6 and 3 & 4 are routed differentially. Pin 2 is routed to the ground plane. Pin 5 does not have an internal connection in the device and does not need to be routed anywhere on the board. It is also acceptable to connect pin 5 to the ground plane.

### 11.1 Trademarks

All trademarks are the property of their respective owners.

### 11.2 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
