In today's industrial automation market new technology brings many opportunities for industrial system developers to successfully address ever-evolving challenges.

Automation systems require cutting-edge technologies to meet stringent customer requirements for high reliability and harsh environment in mission-critical environments for applications ranging from programmable logic controllers and industrial computers to human machine interface, industrial peripherals and factory communication.

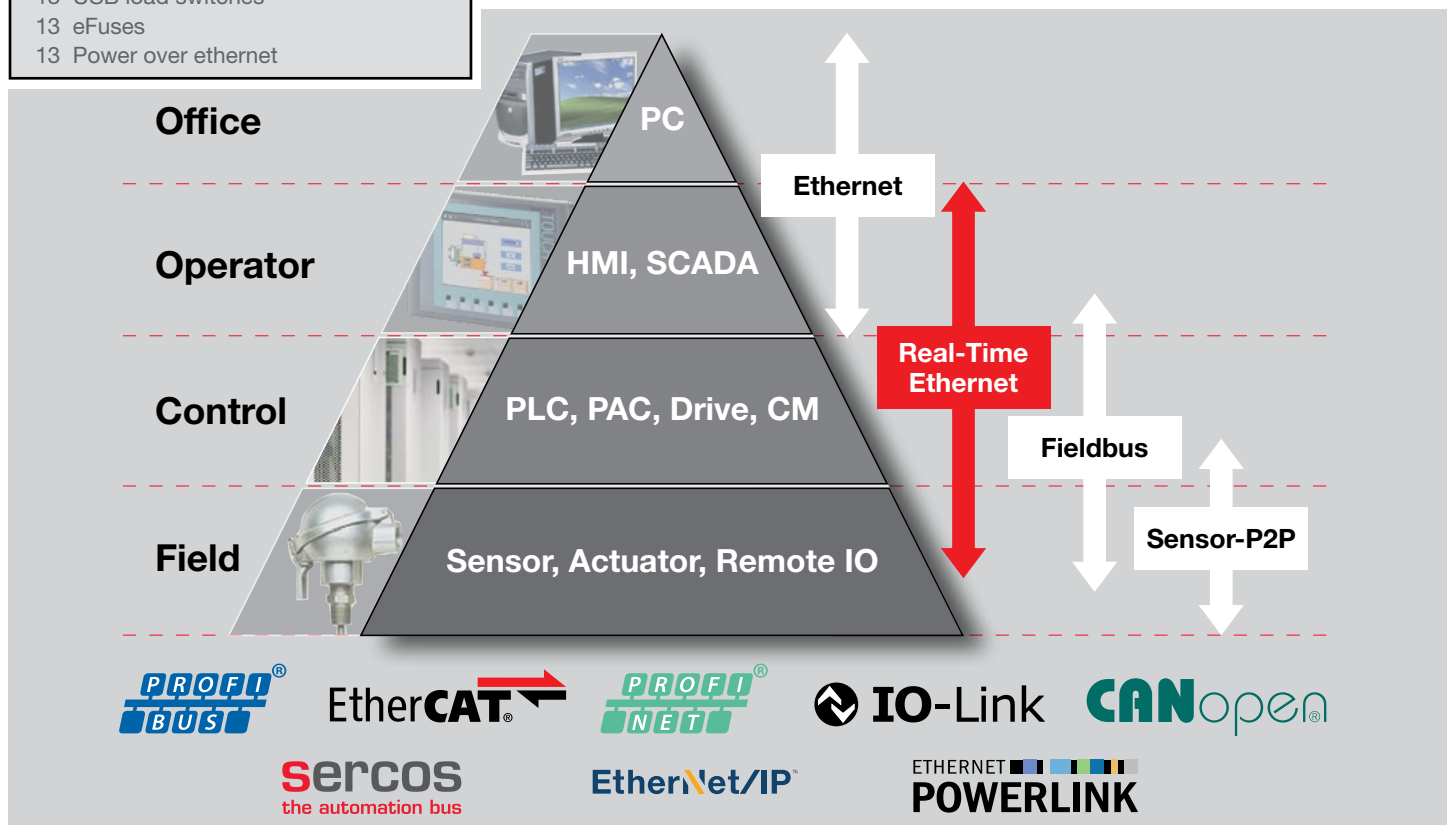

Texas Instruments has a strategic commitment to the factory automation industry with an extensive portfolio and a long product life supply, as well as a strong local-based support.

- Dedicated system solutions
- Development tools
- Close partnership with the industrial ecosystem
- Strong portfolio with industrial feature set:
 - Low power efficiency
 - Long product life supply policy

- Innovative technology
- Flexibility and future-proof product roadmap
- Safety-relevant protocols (IEC 61508, SIL)

In the past industrial automation applications were implemented using a variety of external components, making yesterday's solutions very complex, expensive and nonflexible to evolve as standards also evolve.

The Sitara™ AM335x processors from TI are the industry's first low-power ARM® Cortex®-A8 devices to incorporate multiple industrial communication protocols on a single chip. The six pin-to-pin and software-compatible devices in this generation of processors, along with industrial hardware development tools, software and analog components provide a total industrial system solution. Using this solution, developers can get to market faster with their industrial automation designs, including input/output (I/O) devices, human machine interface (HMI) and programmable logic controllers (PLCs).

Industrial communication

Overview (continued)

30 percent BOM reduction

The unique PRU-ICSS (programmable industrial communication sub system) integrated in Sitara AM335x processors eliminates the need for an external ASIC or FPGA to reduce system complexity and save on bill of materials (BOM) costs by more than 30 percent. The Sitara AM335x processors also include other key industrial peripherals on-chip for additional BOM savings, including CAN, ADC, USB + PHY and two-port gigabit Ethernet with IEEE 1588 to enable fast network connectivity and rapid data throughput, as well as connection to sensors, actuators and motor control.

Scalability

Designers can take advantage of the pin-to-pin and software compatibility of the Sitara AM335x processors and design several end equipments with the devices that best fit their industrial automation need, such as:

- **Drives and I/O-level devices:**

Specifically targeted to enable sensors, actuators, motor drives, communications modules and gateways needing industrial slave communications, the AM3357 and AM3356 processors offer a low-performance solution.

These two devices do not require an external memory or an operating system making the system solution simple and compact.

- **Industrial PLC applications:** Offering high-performance of up to 1 GHz, the AM3357 and AM3359 processors are well-suited for high-performance PLC applications that need to control various I/O devices in an automation system such as electric motors, pneumatic or hydraulic cylinders, magnetic relay solenoids and more.
- **HMI products:** Perfect for designing HMI products, the AM3354, AM3358 and AM3359 processors offer an on-chip 3D graphics accelerator, which combined with the integrated touch-screen controller, enables rich and intuitive graphical user touch-screen interfaces. For HMI applications not requiring integrated industrial communications, the AM3354 and AM3352 processors offer low-cost options.

Industrial hardware and software tools

Accompanying the Sitara AM335x processors is an industrial hardware development tool to enable customers to easily incorporate industrial communication standards in their industrial automation products.

AM3359 Industrial Communications Engine (ICE)

The TMDSCICE3359 is a development platform targeted for systems that specifically focus on the industrial communications capabilities of the Sitara AM335x processors.

The AM335x processors integrate the PRU-ICSS that has been architected to implement the real-time communication technologies used in a broad range of industrial automation equipment. It enables low footprint designs with minimal external components and with best-in-class low-power performance. Learn more at

www.ti.com/tool/tmdsice3359

Designers can also utilize the previously announced AM335x EVM. Free, production-ready, certified system solution software for industrial automation protocols, including industrial design-specific demos, applications notes and videos make development easy. Software resources required for physical and data link layer implementations of many industrial communications standards are available as well as software frameworks for SYS/BIOS™ real-time kernel and applications stacks for industrial

▲ Industrial Communications Engine available for \$179 USD

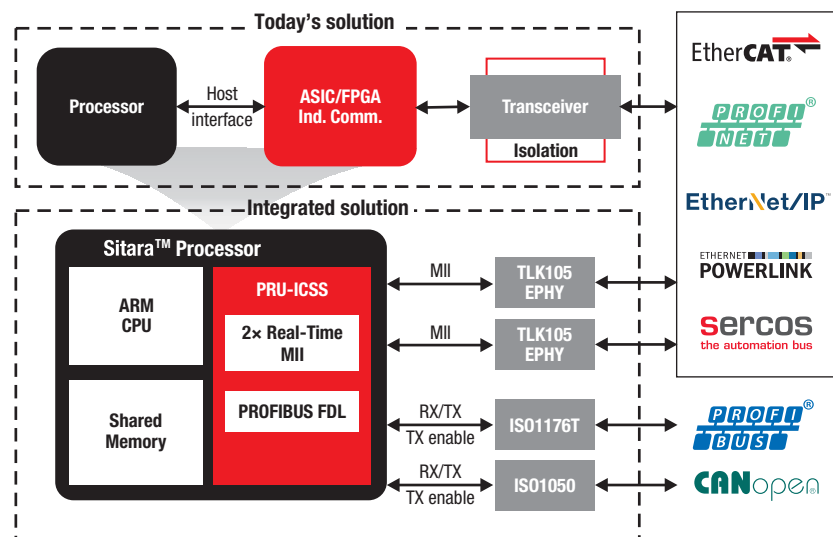

communication standards, allowing customers to focus on differentiating application level aspects of their system.

TI offers the ability to complete an entire industrial system design with TI analog ICs, including industrial Ethernet and isolated CAN transceivers, motor drivers, temperature sensors and power management devices, plus wireless connectivity options to complement the AM335x processors.

The AM437x Industrial Development Kit (IDK) is an application development platform for evaluating the industrial communication and control capabilities of Sitara AM4379 and AM4377 processors for industrial applications.

The AM4379 and AM4377 processors are ideal for industrial communications, industrial control, and industrial drives applications. The AM437x processors integrate a quad-core programmable real-time unit (PRU) that has been architected to implement the real-time communication technologies used in a broad range of industrial automation equipment. It enables low footprint designs with minimal external components and with best in class low power performance. Learn more at

Industrial ethernet protocols designs

| Name | Description | Key Features |
|--|---|--|
| EtherCAT® communications development platform  | <p>Targeted for EtherCAT slave communications, this development platform (TIDEP0001) allows designers to implement real-time EtherCAT communications standards in a broad range of industrial automation equipment. It enables low footprint designs in applications such as industrial automation, factory automation or industrial communication with minimal external components and with best-in-class low-power performance.</p> | <ul style="list-style-type: none"> • EtherCAT conformance tested by EtherCAT Technology Group (ETG) • Free EtherCAT Slave Stack Code (SSC) from Beckhoff available; requires ETG membership (free of charge) and valid EtherCAT Vendor ID • Free board support package and industrial software development kit from TI • Support other industrial communications with the same hardware (e.g., PROFIBUS®, PROFINET®, Ethernet/IP™ and more) • Production ready development platform sub-system which includes schematics, BOM, user guides, application notes, white paper, software, demos and more |
| PROFIBUS communications development platform  | <p>Targeted for PROFIBUS slave communications, this development platform (TIDEP0002) allows designers to implement PROFIBUS communications standards in a broad range of industrial automation equipment. It enables low footprint designs in applications such as industrial automation, factory automation or industrial communication with minimal external components and with best-in-class low-power performance.</p> | <ul style="list-style-type: none"> • AM335x ARM® Cortex®-A8 processor-based design enables 40% system BOM savings by eliminating external ASIC/FPGA • Access to other peripherals and interfaces for a scalable HMI, PLC and I/O solution • PROFIBUS slave certified by Siemens authorized test labs • Pre-tested protocol stack for evaluation • Free board support package and industrial software development kit from TI • Support other industrial communications with the same hardware (e.g., EtherCAT, Profinet, Ethernet/IP and more) • Production ready development platform sub-system includes schematics, BOM, user guides, application notes, white paper, software, demos and more |
| PROFINET communications development platform  | <p>Targeted for PROFINET slave communications, this development platform (TIDEP0008) allows designers to implement PROFINET communications standards in a broad range of industrial automation equipment. It enables low footprint designs in applications such as industrial automation, factory automation or industrial communication with minimal external components and with best in class low power performance.</p> | <ul style="list-style-type: none"> • AM335x ARM Cortex-A8 processor-based design enables 30% system BOM savings by eliminating external ASIC/FPGA • PROFINET IO Device for conformance classes A and B certified by COMDEC • High performance PROFINET cut-through switch supports 250us cycle time with 8 real-time connections. • Very robust PROFINET switch with 4 priority queues per port and content filter passing Netload class 3. • Free board support package and industrial software development kit from TI • Support other industrial communications with the same hardware (e.g., EtherCAT, PROFIBUS, Ethernet/IP and more) • Production Ready development platform sub-system which includes schematics, BOM, user guides, application notes, white paper, software, demos and more |
| Certified Profinet IRT V2.3 device with 1 GHz ARM application processor reference design  | <p>Certified hardware and software components for Profinet IRT V2.3 device applications. This design (TIDEP0029) integrates Industrial Ethernet Phys, Profinet IRT switch, Profinet IRT stack and application example in one package. Profinet is the leading Industrial Ethernet standard used by many Industrial segments and end-equipment which require real-time deterministic exchange of IO data and additional bandwidth for service and diagnostics.</p> | <ul style="list-style-type: none"> • Profinet Conformance Class A/B/C • 250 us cycle time • 1 step time synchronization (PTCP) • 8 consumer and provider protocol machines • MRP – Media Redundancy Protocol • Integrated with Moxlec Profinet stack • Integrated with Interniche SNMP stack |
| Ethernet/IP communications development platform  | <p>Targeted for Ethernet/IP slave communications, this development platform (TIDEP0003) allows designers to implement Ethernet/IP communications standards in a broad range of industrial automation equipment. It enables low footprint designs in applications such as industrial automation, factory automation or industrial communication with minimal external components and with best in class low power performance.</p> | <ul style="list-style-type: none"> • AM335x ARM Cortex-A8 processor-based design enables 30% system BOM savings by eliminating external ASIC/FPGA • Access to other peripherals and interfaces for a scalable HMI, PLC and I/O solution • Free board support package and industrial software development kit from TI • Support other industrial communications with the same hardware (e.g., EtherCAT, PROFIBUS, PROFINET and more) • Production Ready development platform sub-system which includes schematics, BOM, user guides, application notes, white paper, software, demos and more |
| Powerlink on TI Sitara™ processors  | <p>The TIDEP0028 Ethernet Powerlink development platform combines the AM335x Sitara processor family from Texas Instruments (TI) and the Powerlink open media access control (MAC) layer into a single system-on-chip (SoC) solution. Targeted for Ethernet Powerlink slave communications, the TIDEP0028 allows designers to implement the real-time Powerlink communication standard for a broad range of industrial automation equipment. The design is based on the TMD5ICE3359 industrial communications engine (ICE).</p> | <ul style="list-style-type: none"> • Ethernet Powerlink conformance tested • Ethernet Powerlink firmware for PRU-ICSS with openMAC compliant register interface • Board support package and industrial software development kit available from TI and 3rd party • Development platform includes schematics, BOM, user guides, application notes, white paper, software, demos and more • Supports other industrial communications with the same hardware (e.g., EtherCAT, PROFINET, Ethernet/IP and more) |
| Sercos III communications development platform  | <p>The TIDEP0010 Sercos III communication development platform combines the AM335x Sitara processor family from Texas Instruments (TI) and the Sercos III media access control (MAC) layer into a single system-on-chip (SoC) solution. Targeted for Sercos III slave communications, the TIDEP0010 allows designers to implement the real-time Sercos III communication standard for a broad range of industrial automation equipment. The design is based on the TMD5ICE3359 Industrial Communications Engine (ICE).</p> | <ul style="list-style-type: none"> • Sercos III conformance tested • Sercos III firmware for PRU-ICSS with Sercos MAC compliant register interface • Board support package and industrial software development kit available from TI and 3rd party • Development platform which includes schematics, BOM, user guides, application notes, white paper, software, demos and more • Supports other industrial communications with the same hardware (e.g., EtherCAT, PROFINET, Ethernet/IP and more) |

Industrial ethernet protocol designs (continued) / encoder feedback protocols

Industrial ethernet protocols designs

| Name | Description | Key Features |
|--|--|--|
| Sercos III Slave for AM437x – communication development platform  | <p>The TIDEP0039 Sercos III Slave For AM437x Communication Development Platform Reference Design combines the AM437x Sitara processor family from Texas Instruments (TI) and the Sercos III media access control (MAC) layer into a single system-on-chip (SoC) solution. Targeted for Sercos III slave communications, the TIDEP0039 allows designers to implement the real-time Sercos III communication standard for a broad range of industrial automation equipment. The design is based on the TMDXIDK437X industrial development kit (IDK).</p> | <ul style="list-style-type: none"> • Sercos III conformance tested • Sercos III firmware for PRU-ICSS with Sercos MAC compliant register interface • Board support package and industrial development kit available from TI and 3rd party • Development platform includes schematic, BOM, user guides, application notes, white paper, software, demos and more • Supports other industrial Ethernet communication standards with the same hardware (e.g. EtherCAT, PROFINET, Ethernet/IP and more) |
| Multi-protocol industrial ethernet detection with PRU-ICSS | <p>Industrial ethernet for industrial automation exist in more than 30 industrial standards. Some of the well-established real-time Ethernet protocols, like EtherCAT, EtherNet/IP, PROFINET, Sercos III and Powerlink require dedicated MAC hardware support in terms of FPGA or ASICs. The programmable real-time unit inside the Industrial Communication Subsystem (PRU-ICSS), which exists as HW block inside the Sitara processors family, replaces FPGA or ASICs by a single chip solution. A firmware in the PRU-ICSS detects the type of industrial Ethernet protocol and loads the appropriate industrial application during run-time into the Sitara processor. The TIDEP0032 reference design describes the multi-protocol industrial Ethernet protocol detection firmware for PRU-ICSS.</p> | <ul style="list-style-type: none"> • High speed/frequency with high precision for accurate PTO control and synchronization • Implementation without external ASIC or FPGA • Implementation on PRU-ICSS with Sitara processor • Contains PRU-ICSS firmware in source code and can get adoptable by customer • Easy evaluation with TMDXICE3359 industrial communication engine (ICE) EVM |

Encoder feedback protocols designs

| Name | Description | Key Features |
|---|--|---|
| BiSS interface  | <p>Implementation of BiSS-C Master protocol on industrial communication sub-system (PRU-ICSS). The TIDEP0022 reference design provides full documentation and source code for programmable real-time unit (PRU).</p> | <ul style="list-style-type: none"> • BiSS-C master protocol running on ICSS • Interface speed of 1, 2, 5 and 10 MHz • 8x oversampled input capture • Line delay compensation with filtered sample point • Debouncing filter on oversampled input • Variable frame format with crc check • Command (CDS/CDM/CRC) interface • Supports up to 100 m cable • Runs on AM335x and AM437x with ICSS |
| EnDat 2.2 system reference design  | <p>TIDEP0050 implements the EnDat 2.2 master protocol stack and hardware interface solution based on the HEIDENHAIN EnDat 2.2 standard for position or rotary encoders. The design is composed of the EnDat 2.2 master protocol stack, half-duplex communications using RS485 transceivers and the line termination implemented on the Sitara™ AM437x industrial development kit. This design is fully tested to meet the HEIDENHAIN EnDat 2.2 standard. Along with EnDat position feedback, the AM437x IDK is also able to support industrial communications and motor drive as described in the AM437x Single-Chip Motor-Control Design Guide.</p> | <ul style="list-style-type: none"> • Enables developers to use EnDat 2.2 encoder interlaces to implement low footprint, low-power single-chip solutions in applications such as industrial automation and factory automation • EnDat 2.2 interface is technical standard for direct drive technology thanks to its high resolution, short cycle times, commutation information, long line length support and encoder diagnostics • EnDat 2.2 digital technology, simple connection technology and simple voltage supply requirements reduces overall system cost • Based on Sitara AM437x Processor which supports single chip motor control applications and other embedded control and communications applications • Production ready development platform sub-system includes schematics, BOM, user guide, benchmarks, software, demos and more • Free board support package and industrial software development kit from TI • Sitara AM437x supports a number of industrial communications standards including EtherCAT, PROFINET, PROFIBUS™, Ethernet/IP™, Powerlink and Sercos |
| HIPERFACE DSL® master protocol  | <p>TIDEP0035 reference design:</p> <ul style="list-style-type: none"> • HIPERFACE DSL® master protocol with register compatible interface to existing FPGA IP core • Programmable approach using ICSS_L concurrently with DS filter and Industrial Ethernet (Single Chip Drive) • Internal and external sync pulse sources • Supports cable length of up to 100 meter • Line delay compensation • 8x oversampling with sample edge detection • Line diagnostics – quality monitor | <ul style="list-style-type: none"> • HIPERFACE DSL® allows to remove motor feedback cable • Integrated with Single Chip Drive solution • Replaces external FPGA • On chip time synchronization with motor application • 225 MHz design supports minimum sync pulse jitter |

Encoder feedback transceiver reference designs

| Name | Description | Key Features |
|--|---|---|
| Interface to a 5 V BiSS position encoder reference design  | <p>The TIDA-00175 implements a hardware interface solution based on the BiSS standard for position or rotary encoders. It supports both BiSS point-to-point and BiSS bus configurations. The building blocks include the power supply for a 5 V BiSS encoder – with innovative smart e-Fuse technology – and robust full-duplex RS485 transceivers, including line termination and EMC protection. An auxiliary power supply and logic level interface with adjustable I/O voltage level is provided to connect to subsequent MCUs and MPUs that would run the BiSS (or SSI) master protocol stack. This design is fully tested to meet EMC immunity requirements for ESD, fast transient burst and surge according to IEC61800-3.</p> | <ul style="list-style-type: none"> • 3.3 V RS-485 full-duplex transceivers with IEC-ESD meets BiSS clock frequency (10MHz) • Design meets EMC immunity requirements for ESD, fast transient burst and surge according to IEC61800-3 • Wide input (15-30 VDC) high-efficiency (>85%) DCDC power supply for 5 V BiSS (or SSI) encoders with 350 mA, lowest-ripple (<20 mVpp) output • Protected power supply with innovative eFuse technology with inrush current limitation and protection against over-current, over- and under-voltage and disconnect in case of fault. • Option to shut down encoder power supply in case of fault or to save power when no encoder is connected. • 3.3 V interface with level shifter to also support 2.5 V or 1.8 V I/O interface to processors to run the BiSS (or SSI) Master |
| Reference design for an interface to a position encoder with EnDat 2.2  | <p>The TIDA-00172 implements a hardware interface solution based on the HEIDENHAIN EnDat 2.2 standard for position or rotary encoders. The building blocks include the power supply for the encoder – with innovative smart e-Fuse technology - and robust half-duplex RS485 transceivers, including line termination and EMC protection. An auxiliary power supply and logic level interface with adjustable I/O voltage level is provided to connect to subsequent MCUs and MPUs that would run the EnDat 2.2 Master protocol stack. This design is fully tested to meet EMC immunity requirements for ESD, fast transient burst and surge according to IEC61800-3.</p> | <ul style="list-style-type: none"> • Design meets EMC immunity requirements for ESD, fast transient burst and surge according to IEC61800-3 • High-speed RS-485 transceivers robust to 15kV ESD immunity • Wide input (15-30 VDC) high-efficiency (>85%) DCDC power supply configurable from 3.6 V to 14 V (defaulted to 8 V) with 200 mA, low-ripple (<20 mVpp) output • Protected power supply with innovative eFuse technology to protect against over-current, over-power, over- and under-voltage and disconnect in case of fault • Option to shut down encoder power supply in case of fault or to save power when no encoder is connected • Level shifter to support 3.3 V, 2.5V or 1.8 V I/O interface to processors like Sitara AM4x for EnDat 2.2 Master |
| Two-wire interface to a HIPERFACE DSL® encoder reference design  | <p>The TIDA-00177 reference design is an EMC compliant industrial interface to a two-wire HIPERFACE DSL® encoder. Applications include industrial servo drives. The design features a 3.3 V supply RS485 transceiver and line termination and coupling for encoder power over RS485 as per HIPERFACE DSL® specification. The design has been tested up to 100 m cable length with an integrated cable, where the encoder's two-wire twisted pair was integrated in the same motor cable. The encoder connector output is protected against over-voltage and short circuit to prevent damage to an encoder or during a cable short. The design features an industrial compliant 24 V input with wide range from 18-36 V. A 3.3 V I/O connector with logic signals for easy interface to a host processor with HIPERFACE DSL® master IP core is made available.</p> | <ul style="list-style-type: none"> • Two-wire interface to a HIPERFACE DSL® encoder. Supports HIPERFACE DSL® 9.375 Mbaud transfer rate with power over RS485, cable length up to 100 m • 3.3 V supply half-duplex RS485 transceiver with 12kV IEC-ESD and 4kV EFT • Wide input (18-36 V) non-isolated power supply with configurable output voltage 7 V - 12 V, default 10.5 V, 250 mA (3.5 A peak) compliant to HIPERFACE DSL® specification • OV, UV and precise over-current limit with short-circuit protection leveraging TI eFuse technology with fault indicator • Logic interface (3.3 V I/O) to host processor like Sitara for the HIPERFACE DSL® master • Designed to meet EMC immunity for ESD, fast transient burst, and surge with levels according to IEC61800-3 |

Industrial ethernet reference designs

| Name | Description | Key Features |
|--|---|--|
| AM3359 industrial communications engine TMSICE3359 | <p>The AM3359 industrial communications engine (ICE) is a development platform targeted for systems that specifically focus on the industrial communications capabilities of the Sitara™ AM335x ARM® Cortex™-A8 processors. The AM335x ARM Cortex-A8 processors integrate the programmable real-time unit (PRU) that has been architected to implement the real-time communication technologies used in a broad range of industrial automation equipment. It enables low footprint designs with minimal external components and with best-in-class-low-power performance.</p> | <ul style="list-style-type: none"> • Option of controlling the Ethernet ports from PRU or from 2-port GbE switch • On-board OLED display • DDR3 memory • Support for larger NOR Flash upto 32 Mb • Industrial communication modules • Industrial communication interfaces for sensors and input/output (I/O) systems • Industrial communication gateways • Industrial drives with integrated communications • Motor feedback systems |
| AM437x Industrial Development Kit (IDK) | <p>The AM437x industrial development kit (IDK) is an application development platform for evaluating the industrial communication and control capabilities of Sitara AM4379 and AM4377 processors for industrial applications. The AM4379 and AM4377 processors are ideal for industrial communications, industrial control and industrial drives applications. The AM437x processors integrate a quad-core programmable real-time unit (PRU) that has been architected to implement the real-time communication technologies used in a broad range of industrial automation equipment. It enables low footprint designs with minimal external components and with best-in-class-low-power performance.</p> | <ul style="list-style-type: none"> • AM4379 ARM Cortex-A9 • 1GB DDR3 • QSPI-NOR flash • Discrete power solution • Industrial communication interfaces • EnDat connectivity for motor feedback control • On-board 2 Mp camera |
| EMI/EMC compliant industrial temp dual port gigabit ethernet reference design | <p>The TIDA-00204 allows for performance evaluation of two industrial grade DP83867IR gigabit Ethernet PHYs and Sitara host processors with integrated Ethernet MAC and switch. It was developed to meet industrial requirements for EMI and EMC. The application firmware implements a driver for the PHY, UDP and TCP/IP stack and HTTP web server examples. The host processor is configured to boot the pre-installed firmware from the on-board SD-card. A USB virtual COM port offers optional access to the PHY registers. A JTAG interface allows for firmware development.</p> | <ul style="list-style-type: none"> • EMI- and EMC-compliant design with wide input voltage range (17-60 V) using two DP83867IR gigabit Ethernet PHYs and AM3359 Sitara processor to work in harsh industrial environments • Exceeds CISPR 11 / EN55011 class A radiated emission requirement by >4.6 dB • Sitara AM3359 firmware, including UDP and TCP/IP stack and HTTP web server examples, boots from on-board SD-Card allowing easy standalone operation • Access to DP83867IR registers via USB virtual COM port allows for custom specific PHY configurations, like RGMII delay mode • Hardware support for class A radiated emission requirements allows IEEE1588 PTP implementation |

TI Designs

Industrial ethernet reference designs (continued) / fieldbus reference designs

Industrial ethernet reference designs

| Name | Description | Key Features |
|---|---|--|
| EN55011 compliant, industrial temperature, 10/100 Mbps Ethernet PHY brick reference design | This Ethernet PHY brick reference design (TIDA-00207) enables Texas Instruments' customers to quickly design systems and release them to market, using TI industrial Ethernet PHY transceiver devices, fully compliant to EN5501 class A EMI requirements. A 50 pin interface is provided to interface with the 32 Bit Cortex M4 processor based controller board. The board is designed in a small form factor (2 inches x 3 inches) making it easy to fit into existing products. | <ul style="list-style-type: none"> • Meets EN55011 class A radiated emission requirements • Low power consumption = 264 mW • DP83848K Ethernet PHY configured for MII interface • Programmable LED support for link and activity • External isolation transformer with common-mode choke on PHY side for improved EMI and EMC performance • HBM ESD protection on RD± and TD± of 4k V |
| Compact CAN-to-ethernet converter using 32-bit ARM Cortex-M4F MCU reference design | The TIDA-00203 design demonstrates a small form-factor controller access network (CAN)-to-Ethernet converter using the TM4C129XNCZAD 32-bit ARM; Cortex-M4F MCU. Supporting 10/100 Base-T compliant with IEEE 802.3 standard, this reference design is useful for industrial drives monitoring and control, as well as supervisory control and data acquisition (SCADA) systems. The same hardware can be used as a CAN-to-Ethernet gateway or bridge with simple changes in the firmware. The gateway application is useful for monitoring remote CAN networks over Ethernet, while the bridge application is useful for coupling CAN networks via the the internet or local area network (LAN). | <ul style="list-style-type: none"> • Fully integrated 10/100 Ethernet MAC and PHY with advanced IEEE 1588 precision time protocol (PTP) hardware and both media independent interface (MII) and reduced MII (RMII) support provides a compact Ethernet solution. • Onboard non-isolated controller area network (CAN) and RS-485 PHYs provides easy interface to a variety of fieldbus solutions. Provisional connection allows high efficiency isolated CAN & Profibus interface • JTAG connector for easy programming • Expansion connectors provide access to communication, analog-to-digital converters (ADCs), and general purpose input and output (GPIO) interfaces for maximum flexibility • 50-pin SDCC connector provided for easy interface to the MII and RMII Ethernet PHY for use with other controllers |

Fieldbus reference designs

| Name | Description | Key Features |
|--|--|---|
| MSP430 HART protocol + modem in a single chip transmitter reference design | The HART protocol and HART modem solution is run in a single chip on the MSP430 microcontroller. This reference design provides a full HART and 4-20 mA field transmitter solution interfaced to an RTD temperature sensor. | <ul style="list-style-type: none"> • Single chip HART protocol and modem solution • Full field transmitter system solution • Ultra low power solution |
| Turnkey IO-link sensor transmitter  | The TIDA-00188 offers a rapid prototyping platform for IO-Link sensor transmitters. Thanks to its modular design, different sections can be easily cut away to allow fast and simple interfacing of any analog or digital sensor. The system is programmed with a fully validated IO-Link stack leveraging the fully validated IO-Link PHY. It comes by default with: a switch emulating a digital input, 2 LEDs for status indications and a potentiometer emulating an RTD (read by a 24-bit front-end). All this fitting in a 6 mm wide PCB compatible with the industry standard M12 connector. | <ul style="list-style-type: none"> • RTD performance: maximum measured error: 0.17°C (-200°C to 850°C) • IO-LINK v1.1 connectivity out of the box (TMG stack, PHY and M12 connector) • Easy connection of in-house sensor to the PCB • Designed to meet IEC 61000-4-2, IEC 61000-4-4, IEC 61000-4-5 and IEC 60255-5 standards |
| IO-link sensor transmitter booster pack  | The TIDA-00339 offers a rapid prototyping platform for IO-Link sensor transmitters. Thanks to its design it can be connected to TI's LaunchPad / BoosterPack ecosystem on which the fully validated IO-Link stack is implemented. The system has easy access to all interface and status signals. The different optional settings make the TI Design flexible to adjust for several use cases. With the ability to connect sensor front-ends, the design can be used either as an evaluation platform of the IO-Link interface or as an entire sensor transmitter system. With the industry standard M12 connector, the sub-system can be quickly connected to an IO-Link master system. | <ul style="list-style-type: none"> • IO-Link v1.1 and v1.0 connectivity out of the box (TMG stack, PHY and M12 connector) • Simple interfacing of sensors • Designed to meet: <ul style="list-style-type: none"> • IEC 61000-4-2 • IEC 61000-4-4 • IEC 61000-4-5 • IEC 60255-5 |
| Proximity and temperature multi-variable transmitter with IO-link reference design  | The TIDA-00341 offers a rapid prototyping platform for a Hall-sensing proximity sensor and temperature sensing multi-variable field transmitter with IO-Link. Thanks to its IO-Link interface, the sensor can be used as a multi-variable sensor for proximity sensing and for temperature sensing. TIDA-00341 comes by default with an integrated Hall-sensor, a switch and 2 LEDs for status indications. This entire design fits in a 6 mm wide PCB compatible with the industry standard M12 connector. | <ul style="list-style-type: none"> • Hall-effect latch proximity sensor with IO-Link interface • Ambient temperature sensing • IO-LINK v1.1 connectivity out of the box (TMG stack, PHY and M12 connector) • Designed to meet IEC 61000-4-2, IEC 61000-4-4, IEC 61000-4-5 and IEC 60255-5 standards |
| Hall sensor proximity sensor w/fixed threshold and temperature sensing over IO-link reference design  | The TIDA-00340 offers a rapid prototyping platform for a magnetic-field proximity sensor with IO-Link. Thanks to its IO-Link interface the sensor can be used as a multi-variable sensor for proximity sensing and for temperature sensing. TIDA-00340 comes by default with an integrated Hall-sensor, a switch and 2 LED for status indications. All this fits in a 6 mm wide PCB compatible with the industry standard M12 connector. | <ul style="list-style-type: none"> • Hall-effect latch proximity sensor with IO-Link interface • Ambient temperature sensing • IO-LINK v1.1 connectivity out of the box (TMG stack, PHY and M12 connector) • Designed to meet IEC 61000-4-2, IEC 61000-4-4, IEC 61000-4-5 and IEC 60255-5 standards |

|-------------|--|---|----------------------------------|---------------------------------|---------------------------------|----------------------------------|----------------------------------|---------------------------------|----------------------------------|------------------|---|--|--|------------------|
| TPS7A47 | 36 V, 1 A, 4.17 μVRMS, RF LDO voltage regulator | Adjustable Output | 1 | 3 | 36 | 1.4 | 34 | 0.58 | 307 | 4 | Enable, overcurrent protection, soft start, thermal shutdown | –40 to 125 | 20/QFN | 2.10 |
| TPS7A33 | Vin -3 V to -36 V, -1 A, ultra-low noise, high PSRR, low-dropout linear regulator | Adjustable Output | 1 | -36 | -3 | -33 | -1.2 | 0.21 | 290 | 16 | Enable, overcurrent protection, soft start, thermal shutdown | –40 to 125 | 20/QFN, TO-220 | 2.70 |
| LM2992 | Micropower 250 mA low-noise ultra low-dropout regulator | Fixed 1.5V, 1.8 V, 2.5 V, 3.3 V, 5 V | 0.25 | 2.2 | 16 | Fixed outputs | Fixed outputs | 0.065 | 450 | 30 | Enable, overcurrent protection, thermal shutdown | –40 to 125 | 5/SOT, 6/SO | 0.38 |
| TLV1117 | Single output LDO, 800 mA, fixed and adj., internal current limit, thermal overload protection | Adjustable Output | 0.8 | 15 | 2.7 | 13.7 | 1.25 | 0.08 | 1200 | – | Overcurrent protection, thermal shutdown | –40 to 125, 0 to 125 | DDPAK/TO-263, SON, SOT-223, TO-220, TO-252 | 0.18 |
| UA78L05 | 3/8 pin 100 mA fixed 5 V positive voltage regulator | Fixed Output | 0.1 | 20 | 7 | 5 | 5 | 3.8 | 1700 | 42 | Overcurrent protection, thermal shutdown | 0 to 125 | SOIC, SOT-89, TO-92 | 0.09 |
| TPS709 | 30 V, 150 mA, ultra-low I _Q low-dropout regulator | Fixed 1.2V, 1.35V, 1.5V, 1.6V, 1.8V, 1.9V, 2.5V, 2.8V, 3.0V, 3.3V, 3.6V, 3.8V, 3.9V, 5.0V, 6.0V | 0.15 | 2.7 | 30 | Fixed outputs | Fixed outputs | 0.001 | 300 | – | Reverse current protection, enable, overcurrent protection, thermal shutdown | –40 to 125 | 5/SOT, 6/SO | 0.39 |
| TLV733P | Capacitor-free, 300 mA, low-dropout regulator with foldback current limit | Fixed 1.0V, 1.1V, 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 2.85V, 3.0V, 3.3V | 0.3 | 1.4 | 5.5 | Fixed outputs | Fixed outputs | 0.034 | 122 | – | Enable, stable without output capacitors, foldback overcurrent protection, output discharge, thermal shutdown | –40 to 125 | 5/SOT, 4/SO | 0.17 |

Supply voltage supervisor

| Part Number | Description | # of Supplies Monitored | Threshold Voltages (Typ) (V) | V _{CC} (Min) (V) | V _{CC} (Max) (V) | I _Q (Typ) (μA) | Output Driver Type / Reset Output | Reset Threshold Accuracy (%) | Watchdog Timer WDI (s) | Time Delay (ms) | Special Features | Operating Temperature Range(°C) | Pin/ Package | Price* (US\$) |
|-------------|--|-------------------------|------------------------------|---------------------------|---------------------------|---------------------------|-----------------------------------|------------------------------|------------------------|-----------------------|--|---------------------------------|--------------|---------------|
| TPS386000 | Quad supply voltage supervisors with programmable delay and watchdog timer | 4 | 0.4 | 1.8 | 6.5 | 12 | Active-low, open-drain | 1 | 0.45 | 20, 300, programmable | Manual reset, negative voltage monitoring, overvoltage sense, programmable delay | –40 to 125 | 20/QFN | 0.95 |

Power Management ICs (PMICs)

| Part Number | Description | Regulated Outputs (#) | MCU/ processor attached | V _{IN} (Min) (V) | V _{IN} (Max) (V) | LDO | Step-Up DC/DC Converter | Step-Down DC/DC Converter | I _{OUT} (Max) (A) | Operating Temperature Range (°C) | Pin/ Package | Price* (US\$) |
|-------------|--|-----------------------|-------------------------|---------------------------|---------------------------|-----|-------------------------|---------------------------|----------------------------|----------------------------------|-----------------|---------------|
| TPS659039 | Automotive power management IC (PMIC) for ARM® Cortex®-A15 processor | 13 | AM572x | 3.15 | 5.5 | 6 | – | 7 | 6 | –40 to 85 | 169NFBGA | – |
| TPS65917 | Power management unit (PMU) for processor | 10 | DRA72x, TDA3x | 3.15 | 5.5 | 5 | – | 5 | 7 | –40 to 105 | 40WQFN | – |
| TPS65218 | PMIC for ARM Cortex-A8/A9 SoCs and FPGA | 7 | AM437x, AM335x | 2.2 | 5.5 | 1 | 1 | 5 | – | – | 48HTQFP, 48VQFN | 3.45 |
| TPS65023 | 6-channel PMIC with 3DC/DCs, 3 LDOs, I2C interface and DVS | 6 | DM357x, DM644x, AM35xx | 1.5 | 6.5 | 3 | – | 3 | – | – | 40WQFN | 2.95 |
| TPS650250 | Integrated power management IC w/ 4 DC/DCs and 3 LDOs in 5 mm QFN | 6 | – | 2.5 | 6 | 3 | – | 3 | 1.6 | –40 to 85 | 32 VQFN | 2.20 |
| TPS65910A | Integrated power management IC w/ 4 DC/DCs, 8 LDOs and RTC in 6 mm QFN | 11 | – | 2.7 | 5.5 | 9 | 1 | 3 | 1.7 | –40 to 85 | 48 VQFN | 3.45 |
| TPS65217 | Single-chip PMIC for battery-powered systems for AM335x ZCE/ZCZ, DDR2 | 7 | – | 2.7 | 5.8 | 4 | – | 3 | 1.2 | –40 to 105 | 48 VQFN | 3.45 |

*Suggested resale price in U.S. dollars in quantities of 1,000

Power management

Load switches / USB load switches / eFuses / power over ethernet

Load switches

| Part Number | Description | V _{IN} (Max) (V) | I _{max} (A) | R _{on} (mΩ) | Leakage Current (μA) (Typ) | Channels | Special Features | Operating Temp. (°C) | Pin/ Package | Price* (US\$) |
|-----------------|---|---------------------------|----------------------|----------------------|----------------------------|----------|--|----------------------|---------------|---------------|
| TPS22954 | 5.7 V, 5 A, 14 mΩ load switch with voltage monitoring and quick output discharge | 0.7 to 5.7 | 5 | 14 | 34 | 1 | Adjustable rise time, power good, quick output discharge V _{bias} | –40 to 105 | 10WSON | 0.36 |
| TPS22968 | 5.5 V, 4 A, 25 mΩ, 2-channel load switch with quick output discharge and adjustable rise time | 0.8 to 5.5 | 4 | 25 | 55 | 2 | Adjustable rise time, quick output discharge V _{bias} | –40 to 85 | 14WSON | 0.36 |
| TPS22960 | 5.5V, 0.5A, 435mΩ, 2-Channel Load Switch with Quick Output Discharge | 1.62 to 5.5 | 0.5 | 435 | 0 | 2 | Quick output discharge | –40 to 85 | 8SOT-23 8UQFN | 0.36 |

USB load switches

| Part Number | Description | V _{IN} (Max) (V) | I _{max} (A) | R _{on} (mΩ) | Leakage Current (μA) (Typ) | Channels | Special Features | Operating Temperature Range (°C) | Pin/ Package | Price* (US\$) |
|-----------------|--|---------------------------|----------------------|----------------------|----------------------------|----------|---|----------------------------------|--------------------------------|---------------|
| TPS2553 | Adjustable, precision, current-limited power-distribution switch | 6.5 | 1.5 | 85 | 1 | 1 | Adjustable current limit, reverse input/output voltage protection UL-listed | –40 to 85 | 6 SOT-23 6SON | 0.75 |
| TPS2051B | 0.5 A fixed current limit, power-distribution switch | 5.5 | 0.5 | 70 | 1 | 1 | Overcurrent flag thermal and short circuit protection UL-listed | –40 to 85 | 6 SOT-23 8MSOP Power Pad 8SOIC | 0.5 |
| TPS2052B | 0.5 A fixed current limit, power-distribution switch | 5.5 | 0.5 | 70 | 1 | 2 | Overcurrent flag thermal and short circuit protection UL-listed | –40 to 85 | 8MSOP Power Pad 8SOIC 8SON | 0.63 |

eFuses

| Part Number | Description | V _{IN} (Max) (V) | I _{max} (A) | R _{on} (mΩ) | Current Limit Accuracy | Channels | Special Features | Operating Temp. (°C) | Pin/ Package | Price* (US\$) |
|-----------------|--|---------------------------|----------------------|----------------------|------------------------|----------|---|----------------------|--------------|---------------|
| TPS25927 | 18 V, 5 A, 28 mΩ eFuse with BFET driver for reverse current protection | 4.5 to 18 | 5 | 28 | ±8% | 1 | Reverse current protection, thermal shutdown, undervoltage protection | –40 to 85 | 10VSON | 0.55 |
| TPS25921 | 18 V, 1.6 A, 90 mΩ eFuse with adjustable +/-2% accurate current limit | 4.5 to 18 | 1.6 | 90.0 | ±2% | 1 | Fault reporting, overvoltage protection, undervoltage protection | –40 to 85 | 8SOIC | 0.50 |
| TPS25942 | 18 V, 5 A, 42 mΩ current limiting power MUX eFuse w/integrated reverse current protection, IMON & PG | 2.7 to 18 | 5 | 42 | ±8% | 1 | Current sense/monitor, fault reporting, overvoltage protection, power good, reverse current protection, thermal shutdown, undervoltage protection | –40 to 85 | 20WQFN | 1.10 |

Power over ethernet (PoE)

| Part Number | Description | PoE Standards Supported | PD Power Level | PoE Inrush Limit (Typ) (mA) | PoE Current Limit (Min) (mA) | UVLO | rDS(on) per FET (Typ) (mΩhms) | Fault Response | Error Amplifier | Auxiliary/ Local Power Support | Auxiliary Power Rails Supported | Duty Cycle (%) | Switching Frequency | Pin/ Package | Price* (US\$) |
|-------------------|--|-------------------------|------------------|-----------------------------|------------------------------|------------------------|-------------------------------|----------------|-----------------|--------------------------------|---------------------------------|----------------|------------------------------|---------------|---------------|
| TPS2379 | IEEE 802.3at PoE high-power PD interface with external gate driver | 802.3at type 2 | External circuit | 140 | 850 | 802.3at type 1/ type 2 | 420 | Auto retry | No | No | N/A | N/A | N/A | 8/SO PowerPAD | 1.00 |
| TPS2378 | IEEE 802.3at PoE high-power PD interface with AUX control | 802.3at type 2 | 25 W | 140 | 850 | 802.3at type 1/ type 2 | 420 | Auto retry | No | Yes | Yes | N/A | N/A | 8/SO PowerPAD | 1.00 |
| TPS23753A | IEEE 802.3-2005 PoE interface and isolated converter controller with enhanced ESD ride-through | 802.3at type1 | 13 W | 140 | 405 | Unified | 700 | Auto retry | No | Programmable | 12V-57 V | 78 | Programmable, synchronizable | 14/TSSOP | 1.10 |
| TPS23754-1 | IEEE 802.3at PoE interface and isolated converter controller | 802.3at type1, 2 | 25 W | 140 | 850 | Unified | 430 | Auto retry | No | Programmable | 24V-57 V | 78 | Programmable, synchronizable | 20/HTSSOP | 1.25 |

*Suggested resale price in U.S. dollars in quantities of 1,000.

Important Notice: The products and services of Texas Instruments Incorporated and its subsidiaries described herein are sold subject to TI's standard terms and conditions of sale. Customers are advised to obtain the most current and complete information about TI products and services before placing orders. TI assumes no liability for applications assistance, customer's applications or product designs, software performance, or infringement of patents. The publication of information regarding any other company's products or services does not constitute TI's approval, warranty or endorsement thereof.

B021014

The platform bar, DCS-Control, Eco-mode, OMAP and Sitara are trademarks of Texas Instruments. All other trademarks are the property of their respective owners.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have not been so designated is solely at the Buyer’s risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
