

- **Low Supply Voltage Range 1.8 V to 3.6 V**
- **Ultralow-Power Consumption:**
  - Active Mode: 200  $\mu$ A at 1 MHz, 2.2 V
  - Standby Mode: 0.7  $\mu$ A
  - Off Mode (RAM Retention): 0.1  $\mu$ A
- **Five Power Saving Modes**
- **Wake-Up From Standby Mode in less than 6  $\mu$ s**
- **16-Bit RISC Architecture, 125 ns Instruction Cycle Time**
- **Basic Clock Module Configurations:**
  - Various Internal Resistors
  - Single External Resistor
  - 32 kHz Crystal
  - High Frequency Crystal
  - Resonator
  - External Clock Source
- **16-Bit Timer\_A With Three Capture/Compare Registers**
- **On-Chip Comparator for Analog Signal Compare Function or Slope A/D Conversion**
- **Serial Communication Interface (USART0) Software-Selects Asynchronous UART or Synchronous SPI**
- **Serial Onboard Programming, No External Programming Voltage Needed Programmable Code Protection by Security Fuse**
- **Family Members Include:**
  - MSP430F122: 4KB + 256B Flash Memory  
256B RAM
  - MSP430F123: 8KB + 256B Flash Memory  
256B RAM
- **Available in a 28-Pin Plastic Small-Outline Wide Body (SOWB) Package, 28-Pin Plastic Thin Shrink Small-Outline Package (TSSOP) and 32-Pin QFN Package**
- **For Complete Module Descriptions, See the *MSP430x1xx Family User's Guide*, Literature Number SLAU049**

## description

The Texas Instruments MSP430 family of ultralow power microcontrollers consist of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low power modes is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that attribute to maximum code efficiency. The digitally controlled oscillator (DCO) allows wake-up from low-power modes to active mode in less than 6 $\mu$ s.

The MSP430F12x series is an ultralow-power mixed signal microcontroller with a built-in 16-bit timer and twenty-two I/O pins. The MSP430F12x series also has a built-in communication capability using asynchronous (UART) and synchronous (SPI) protocols in addition to a versatile analog comparator.

Typical applications include sensor systems that capture analog signals, convert them to digital values, and then process the data and display them or transmit them to a host system. Stand alone RF sensor front end is another area of application. The I/O port inputs provide single slope A/D conversion capability on resistive sensors.

# MSP430x12x MIXED SIGNAL MICROCONTROLLER

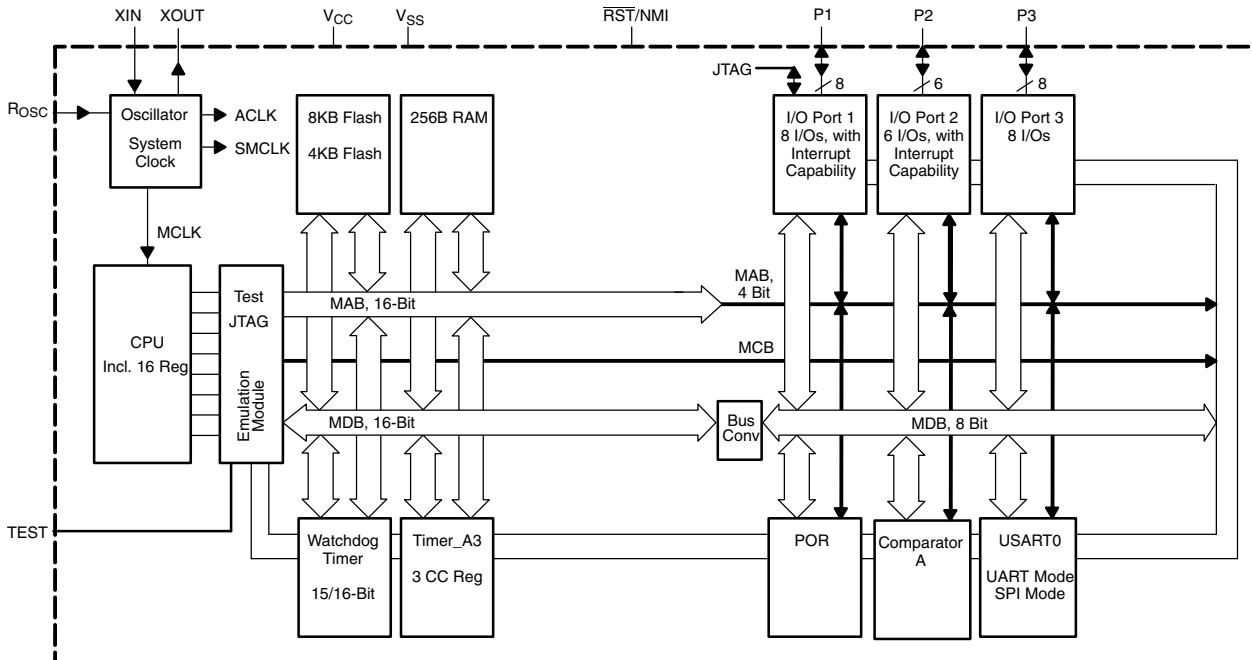

SLAS312C – JULY 2001 – REVISED SEPTEMBER 2004

## short-form description

### CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.

### instruction set

The instruction set consists of 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. Table 1 shows examples of the three types of instruction formats; the address modes are listed in Table 2.

|                          |           |
|--------------------------|-----------|
| Program Counter          | PC/R0     |
| Stack Pointer            | SP/R1     |
| Status Register          | SR/CG1/R2 |
| Constant Generator       | CG2/R3    |
| General-Purpose Register | R4        |
| General-Purpose Register | R5        |
| General-Purpose Register | R6        |
| General-Purpose Register | R7        |
| General-Purpose Register | R8        |
| General-Purpose Register | R9        |
| General-Purpose Register | R10       |
| General-Purpose Register | R11       |
| General-Purpose Register | R12       |
| General-Purpose Register | R13       |
| General-Purpose Register | R14       |
| General-Purpose Register | R15       |

**Table 1. Instruction Word Formats**

|                                   |                |                       |
|-----------------------------------|----------------|-----------------------|
| Dual operands, source-destination | e.g. ADD R4,R5 | R4 + R5 ----> R5      |
| Single operands, destination only | e.g. CALL R8   | PC -->(TOS), R8--> PC |
| Relative jump, un/conditional     | e.g. JNE       | Jump-on-equal bit = 0 |

**Table 2. Address Mode Descriptions**

| ADDRESS MODE           | S | D | SYNTAX          | EXAMPLE          | OPERATION                        |

NOTE: S = source    D = destination

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

### operating modes

The MSP430 has one active mode and five software selectable low-power modes of operation. An interrupt event can wake up the device from any of the five low-power modes, service the request and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode AM;
  - All clocks are active
- Low-power mode 0 (LPM0);
  - CPU is disabled  
ACLK and SMCLK remain active. MCLK is disabled
- Low-power mode 1 (LPM1);
  - CPU is disabled  
ACLK and SMCLK remain active. MCLK is disabled  
DCO's dc-generator is disabled if DCO not used in active mode
- Low-power mode 2 (LPM2);
  - CPU is disabled  
MCLK and SMCLK are disabled  
DCO's dc-generator remains enabled  
ACLK remains active
- Low-power mode 3 (LPM3);
  - CPU is disabled  
MCLK and SMCLK are disabled  
DCO's dc-generator is disabled  
ACLK remains active
- Low-power mode 4 (LPM4);
  - CPU is disabled  
ACLK is disabled  
MCLK and SMCLK are disabled  
DCO's dc-generator is disabled  
Crystal oscillator is stopped

# MSP430x12x MIXED SIGNAL MICROCONTROLLER

SLAS312C – JULY 2001 – REVISED SEPTEMBER 2004

## interrupt vector addresses

The interrupt vectors and the power-up starting address are located in the address range of 0FFFFh-0FFE0h. The vector contains the 16-bit address of the appropriate interrupt handler instruction sequence.

| INTERRUPT SOURCE   | INTERRUPT FLAG   | SYSTEM INTERRUPT                                     | WORD ADDRESS | PRIORITY    |
|--|--|--|--------------|-------------|
| Power-up<br>External reset<br>Watchdog<br>Flash memory   | WDTIFG (see Note 1)<br>KEYV (see Note 1)   | Reset  | 0FFFEh       | 15, highest |
| NMI<br>Oscillator fault<br>Flash memory access violation | NMIIFG (see Notes 1 and 4)<br>OFIFG (see Notes 1 and 4)<br>ACCVIFG (see Notes 1 and 4) | (non)-maskable,<br>(non)-maskable,<br>(non)-maskable | 0FFFCh       | 14          |
|  |  |  | 0FFFAh       | 13          |
|  |  |  | 0FFF8h       | 12          |
| Comparator_A   | CAIFG  | maskable   | 0FFF6h       | 11          |
| Watchdog timer   | WDTIFG   | maskable   | 0FFF4h       | 10          |
| Timer_A3   | TACCR0 CCIFG (see Note 2)  | maskable   | 0FFF2h       | 9           |
| Timer_A3   | TACCR1 and TACCR2<br>CCIFGs, TAIFG<br>(see Notes 1 and 2)                              | maskable   | 0FFF0h       | 8           |
| USART0 receive   | URXIFG0  | maskable   | 0FFEEh       | 7           |
| USART0 transmit  | UTXIFG0  | maskable   | 0FFEC h      | 6           |
|  |  |  | 0FFEAh       | 5           |
|  |  |  | 0FFE8h       | 4           |
| I/O Port P2<br>(eight flags – see Note 3)                | P2IFG.0 to P2IFG.7<br>(see Notes 1 and 2)  | maskable   | 0FFE6h       | 3           |
| I/O Port P1<br>(eight flags)                             | P1IFG.0 to P1IFG.7<br>(see Notes 1 and 2)  | maskable   | 0FFE4h       | 2           |
|  |  |  | 0FFE2h       | 1           |
|  |  |  | 0FFE0h       | 0, lowest   |

- NOTES:
- Multiple source flags
  - Interrupt flags are located in the module
  - There are eight Port P2 interrupt flags, but only six Port P2 I/O pins (P2.0–5) are implemented on the '12x devices.
  - (non)-maskable: the individual interrupt enable bit can disable an interrupt event, but the general interrupt enable cannot.

## special function registers

Most interrupt and module enable bits are collected into the lowest address space. Special function register bits that are not allocated to a functional purpose are not physically present in the device. Simple software access is provided with this arrangement.

### interrupt enable 1 and 2

| Address | 7 | 6 | 5      | 4     | 3 | 2 | 1    | 0     |
|---------|---|---|--------|-------|---|---|------|-------|
| 0h      |   |   | ACCVIE | NMIIE |   |   | OFIE | WDTIE |
|         |   |   | rw-0   | rw-0  |   |   | rw-0 | rw-0  |

**WDTIE:** Watchdog-timer interrupt enable. Inactive if watchdog mode is selected. Active if watchdog timer is configured in interval timer mode.

**OFIE:** Oscillator-fault-interrupt enable

**NMIIE:** Nonmaskable-interrupt enable

**ACCVIE:** Flash access violation interrupt enable

| Address | 7 | 6 | 5 | 4 | 3 | 2 | 1      | 0      |
|---------|---|---|---|---|---|---|--------|--------|
| 01h     |   |   |   |   |   |   | UTXIE0 | URXIE0 |
|         |   |   |   |   |   |   | rw-0   | rw-0   |

**URXIE0:** USART0: UART and SPI receive-interrupt enable

**UTXIE0:** USART0: UART and SPI transmit-interrupt enable

### interrupt flag register 1 and 2

| Address | 7 | 6 | 5 | 4      | 3 | 2 | 1     | 0      |
|---------|---|---|---|--------|---|---|-------|--------|
| 02h     |   |   |   | NMIIFG |   |   | OFIFG | WDTIFG |
|         |   |   |   | rw-0   |   |   | rw-1  | rw-(0) |

**WDTIFG:** Set on watchdog timer overflow (in watchdog mode) or security key violation. Reset on  $V_{CC}$  power up or a reset condition at the  $\overline{RST}/NMI$  pin in reset mode.

**OFIFG:** Flag set on oscillator fault

**NMIIFG:** Set via  $\overline{RST}/NMI$  pin

| Address | 7 | 6 | 5 | 4 | 3 | 2 | 1       | 0       |
|---------|---|---|---|---|---|---|---------|---------|

## bootstrap loader (BSL)

The MSP430 bootstrap loader (BSL) enables users to program the flash memory or RAM using a UART serial interface. Access to the MSP430 memory via the BSL is protected by user-defined password. For complete description of the features of the BSL and its implementation, see the Application report *Features of the MSP430 Bootstrap Loader*, Literature Number SLAA089.

| BSL Function  | DW & PW Package Pins | RHB Package Pins |
|---------------|----------------------|------------------|
| Data Transmit | 22 - P1.1            | 22 - P1.1        |
| Data Receive  | 10 - P2.2            | 8 - P2.2         |

## flash memory

The flash memory can be programmed via the JTAG port, the bootstrap loader, or in-system by the CPU. The CPU can perform single-byte and single-word writes to the flash memory. Features of the flash memory include:

- Flash memory has n segments of main memory and two segments of information memory (A and B) of 128 bytes each. Each segment in main memory is 512 bytes in size.
- Segments 0 to n may be erased in one step, or each segment may be individually erased.
- Segments A and B can be erased individually, or as a group with segments 0–n. Segments A and B are also called *information memory*.
- New devices may have some bytes programmed in the information memory (needed for test during manufacturing). The user should perform an erase of the information memory prior to the first use.

## peripherals

Peripherals are connected to the CPU through data, address, and control busses and can be handled using all instructions. For complete module descriptions, see the *MSP430x1xx Family User's Guide*, literature number SLAU049.

## oscillator and system clock

The clock system in the MSP430x12x devices is supported by the basic clock module that includes support for a 32768-Hz watch crystal oscillator, an internal digitally-controlled oscillator (DCO) and a high frequency crystal oscillator. The basic clock module is designed to meet the requirements of both low system cost and low-power consumption. The internal DCO provides a fast turn-on clock source and stabilizes in less than 6  $\mu$ s. The basic clock module provides the following clock signals:

- Auxiliary clock (ACLK), sourced from a 32768-Hz watch crystal or a high frequency crystal.
- Main clock (MCLK), the system clock used by the CPU.
- Sub-Main clock (SMCLK), the sub-system clock used by the peripheral modules.

## digital I/O

There are three 8-bit I/O ports implemented—ports P1, P2, and P3 (only six port P2 I/O signals are available on external pins):

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt conditions is possible.
- Edge-selectable interrupt input capability for all the eight bits of ports P1 and six bits of port P2.
- Read/write access to port-control registers is supported by all instructions.

**NOTE:**

Six bits of port P2, P2.0 to P2.5, are available on external pins – but all control and data bits for port P2 are implemented. Port P3 has no interrupt capability.

## watchdog timer

The primary function of the watchdog timer (WDT) module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be configured as an interval timer and can generate interrupts at selected time intervals.

# MSP430x12x MIXED SIGNAL MICROCONTROLLER

SLAS312C – JULY 2001 – REVISED SEPTEMBER 2004

## USART0

The MSP430x12x devices have one hardware universal synchronous/asynchronous receive transmit (USART0) peripheral module that is used for serial data communication. The USART supports synchronous SPI (3 or 4 pin) and asynchronous UART communication protocols, using double-buffered transmit and receive channels.

## timer\_A3

Timer\_A3 is a 16-bit timer/counter with three capture/compare registers. Timer\_A3 can support multiple capture/compares, PWM outputs, and interval timing. Timer\_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

| Timer_A3 Signal Connections |           |                     |                   |              |                      |                   |           |
|-----------------------------|-----------|---------------------|-------------------|--------------|----------------------|-------------------|-----------|
| Input Pin Number            |           | Device Input Signal | Module Input Name | Module Block | Module Output Signal | Output Pin Number |           |

## comparator\_A

The primary function of the comparator\_A module is to support precision slope analog-to-digital conversions, battery-voltage supervision, and monitoring of external analog signals.

|  | SFR interrupt enable1 | IE1  | 000h |

## absolute maximum ratings†

|  |                          |
|--|--------------------------|
| Voltage applied at $V_{CC}$ to $V_{SS}$ .....              | -0.3 V to 4.1 V          |
| Voltage applied to any pin (see Note) .....                | -0.3 V to $V_{CC}+0.3$ V |
| Diode current at any device terminal .....                 | $\pm 2$ mA               |
| Storage temperature, $T_{stg}$ (unprogrammed device) ..... | -55°C to 150°C           |
| Storage temperature, $T_{stg}$ (programmed device) .....   | -40°C to 85°C            |

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE: All voltages referenced to  $V_{SS}$ . The JTAG fuse-blow voltage,  $V_{FB}$ , is allowed to exceed the absolute maximum rating. The voltage is applied to the TEST pin when blowing the JTAG fuse.

## recommended operating conditions

|  |                            | MIN               | NOM | MAX   | UNITS |
|--|----------------------------|-------------------|-----|-------|-------|
| Supply voltage during program execution, $V_{CC}$ (see Note 1) |                            | 1.8               |     | 3.6   | V     |
| Supply voltage during program/erase flash memory, $V_{CC}$     |                            | 2.7               |     | 3.6   | V     |
| Supply voltage, $V_{SS}$                                       |                            |                   | 0   |       | V     |
| Operating free-air temperature range, $T_A$                    |                            | -40               |     | 85    | °C    |
| LFXT1 crystal frequency, $f_{(LFXT1)}$<br>(see Note 2)         | LF mode selected, $XTS=0$  | Watch crystal     |     | 32768 | Hz    |
|  | XT1 selected mode, $XTS=1$ | Ceramic resonator |     | 450   | 8000  |
|  |                            | Crystal           |     | 1000  | 8000  |
| Processor frequency $f_{(system)}$ (MCLK signal)               | $V_{CC} = 1.8$ V           | dc                |     | 4.15  | MHz   |
|  | $V_{CC} = 3.6$ V           | dc                |     | 8     |       |

- NOTES: 1. The LFXT1 oscillator in LF-mode requires a resistor of 5.1 M $\Omega$  from XOUT to  $V_{SS}$  when  $V_{CC} < 2.5$  V. The LFXT1 oscillator in XT1-mode accepts a ceramic resonator or a crystal frequency of 4 MHz at  $V_{CC} \geq 2.2$  V. The LFXT1 oscillator in XT1-mode accepts a ceramic resonator or a crystal frequency of 8 MHz at  $V_{CC} \geq 2.8$  V.
2. The LFXT1 oscillator in LF-mode requires a watch crystal. The LFXT1 oscillator in XT1-mode accepts a ceramic resonator or crystal.

NOTE: Minimum processor frequency is defined by system clock. Flash program or erase operations require a minimum  $V_{CC}$  of 2.7 V.

Figure 1. Frequency vs Supply Voltage, MSP430F12x

**electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)**

**supply current (into V<sub>CC</sub>) excluding external current**

NOTE: All inputs are tied to 0 V or V<sub>CC</sub>. Outputs do not source or sink any current.

**current consumption of active mode versus system frequency**

$$I_{AM} = I_{AM[1 \text{ MHz}]} \times f_{\text{system}} [\text{MHz}]$$

**current consumption of active mode versus supply voltage**

$$I_{AM} = I_{AM[3 \text{ V}]} + 120 \mu\text{A/V} \times (V_{CC} - 3 \text{ V})$$

# MSP430x12x MIXED SIGNAL MICROCONTROLLER

SLAS312C – JULY 2001 – REVISED SEPTEMBER 2004

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

## Schmitt-trigger inputs Port P1 to Port P3; P1.0 to P1.7, P2.0 to P2.5, P3.0 to P3.7

| PARAMETER        |  | V <sub>CC</sub> | MIN | TYP | MAX | UNIT |
|------------------|--|-----------------|-----|-----|-----|------|
| V <sub>IT+</sub> | Positive-going input threshold voltage                           | 2.2 V           | 1.1 |     | 1.5 | V    |
|                  |  | 3 V             | 1.5 |     | 1.9 |      |
| V <sub>IT-</sub> | Negative-going input threshold voltage                           | 2.2 V           | 0.4 |     | 0.9 | V    |
|                  |  | 3 V             | 0.9 |     | 1.3 |      |
| V <sub>hys</sub> | Input voltage hysteresis, (V <sub>IT+</sub> – V <sub>IT-</sub> ) | 2.2 V           | 0.3 |     | 1.1 | V    |
|                  |  | 3 V             | 0.5 |     | 1   |      |

## standard inputs – RST/NMI, TEST; JTAG: TCK, TMS, TDI/TCLK

| PARAMETER       |                          | V <sub>CC</sub> | MIN                 | TYP | MAX                  | UNIT |
|-----------------|--------------------------|-----------------|---------------------|-----|----------------------|------|
| V <sub>IL</sub> | Low-level input voltage  | 2.2 V/3 V       | V <sub>SS</sub>     |     | V <sub>SS</sub> +0.6 | V    |
| V <sub>IH</sub> | High-level input voltage |                 | 0.8×V <sub>CC</sub> |     | V <sub>CC</sub>      | V    |

## inputs Px.x, TA<sub>x</sub>

| PARAMETER            | TEST CONDITIONS   | V <sub>CC</sub>                                  | MIN   | TYP | MAX | UNIT  |
|----------------------|---|--|-------|-----|-----|-------|
| t <sub>(int)</sub>   | Port P1, P2: P1.x to P2.x, External trigger signal for the interrupt flag, (see Note 1) | 2.2 V/3 V  | 1.5   |     |     | cycle |
|                      |   | 2.2 V  | 62    |     |     | ns    |
|                      |   | 3 V  | 50    |     |     |       |
| t <sub>(cap)</sub>   | Timer_A, capture timing   | TA0, TA1, TA2                                    | 2.2 V | 62  |     | ns    |
|                      |   |  | 3 V   | 50  |     |       |
| f <sub>(TAext)</sub> | Timer_A clock frequency externally applied to pin                                       | TACLK, INCLK t <sub>(H)</sub> = t <sub>(L)</sub> | 2.2 V |     | 8   | MHz   |
|                      |   |  | 3 V   |     | 10  |       |
| f <sub>(TAint)</sub> | Timer_A clock frequency   | SMCLK or ACLK signal selected                    | 2.2 V |     | 8   | MHz   |
|                      |   |  | 3 V   |     | 10  |       |

NOTES: 1. The external signal sets the interrupt flag every time the minimum t<sub>(int)</sub> cycle and time parameters are met. It may be set even with trigger signals shorter than t<sub>(int)</sub>. Both the cycle and timing specifications must be met to ensure the flag is set. t<sub>(int)</sub> is measured in MCLK cycles.

## leakage current (see Notes 1 and 2)

| PARAMETER              | TEST CONDITIONS          | V <sub>CC</sub> | MIN | TYP | MAX | UNIT |
|------------------------|--------------------------|-----------------|-----|-----|-----|------|
| I <sub>lkg(Px.x)</sub> | Port P1: P1.x, 0 ≤ x ≤ 7 | 2.2 V/3 V       |     |     | ±50 | nA   |
|                        | Port P2: P2.x, 0 ≤ x ≤ 5 |                 |     |     | ±50 |      |

NOTES: 1. The leakage current is measured with V<sub>SS</sub> or V<sub>CC</sub> applied to the corresponding pin(s), unless otherwise noted.  
2. The leakage of the digital port pins is measured individually. The port pin must be selected for input and there must be no optional pullup or pulldown resistor.

**electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)**

**outputs Port 1 to Port 3; P1.0 to P1.7, P2.0 to P2.5, P3.0 to P3.7**

| PARAMETER       |                           | TEST CONDITIONS                |                         | MIN        | TYP                   | MAX                   | UNIT |
|-----------------|---------------------------|--------------------------------|-------------------------|------------|-----------------------|-----------------------|------|
| V <sub>OH</sub> | High-level output voltage | I <sub>(OHmax)</sub> = -1.5 mA | V <sub>CC</sub> = 2.2 V | See Note 1 | V <sub>CC</sub> -0.25 | V <sub>CC</sub>       | V    |
|                 |                           | I <sub>(OHmax)</sub> = -6 mA   |                         |            |                       |                       |      |
|                 |                           | I <sub>(OHmax)</sub> = -1.5 mA | V <sub>CC</sub> = 3 V   | See Note 1 | V <sub>CC</sub> -0.25 | V <sub>CC</sub>       |      |
|                 |                           | I <sub>(OHmax)</sub> = -6 mA   |                         |            |                       |                       |      |
| V <sub>OL</sub> | Low-level output voltage  | I <sub>(OLmax)</sub> = 1.5 mA  | V <sub>CC</sub> = 2.2 V | See Note 1 | V <sub>SS</sub>       | V <sub>SS</sub> +0.25 | V    |
|                 |                           | I <sub>(OLmax)</sub> = 6 mA    |                         |            |                       |                       |      |
|                 |                           | I <sub>(OLmax)</sub> = 1.5 mA  | V <sub>CC</sub> = 3 V   | See Note 1 | V <sub>SS</sub>       | V <sub>SS</sub> +0.25 |      |
|                 |                           | I <sub>(OLmax)</sub> = 6 mA    |                         |            |                       |                       |      |

- NOTES: 1. The maximum total current, I<sub>OHmax</sub> and I<sub>OLmax</sub>, for all outputs combined, should not exceed ±12 mA to hold the maximum voltage drop specified.  
 2. The maximum total current, I<sub>OHmax</sub> and I<sub>OLmax</sub>, for all outputs combined, should not exceed ±48 mA to hold the maximum voltage drop specified.

NOTE 1: The limits of the system clock MCLK has to be met. MCLK and SMCLK can have different frequencies.

# MSP430x12x MIXED SIGNAL MICROCONTROLLER

SLAS312C – JULY 2001 – REVISED SEPTEMBER 2004

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

outputs – Ports P1, P2, and P3

NOTE: Only one output is loaded at a time.

**electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)**

**USART (see Note 1)**

| PARAMETER    |                      | TEST CONDITIONS         | MIN | TYP | MAX | UNIT |
|--------------|----------------------|-------------------------|-----|-----|-----|------|
| $t_{(\tau)}$ | USART: deglitch time | $V_{CC} = 2.2\text{ V}$ | 200 | 430 | 800 | ns   |
|              |                      | $V_{CC} = 3\text{ V}$   | 150 | 280 | 500 |      |

NOTE 1: The signal applied to the USART receive signal/terminal (URXD) should meet the timing requirements of  $t_{(\tau)}$  to ensure that the URXS flip-flop is set. The URXS flip-flop is set with negative pulses meeting the minimum-timing condition of  $t_{(\tau)}$ . The operating conditions to set the flag must be met independently from this timing constraint. The deglitch circuitry is active only on negative transitions on the URXD line.

**wake-up from lower power modes (LPMx)**

| PARAMETER    |                         | TEST CONDITIONS   | MIN | TYP | MAX | UNIT |               |
|--------------|-------------------------|---|-----|-----|-----|------|---------------|
| $t_{(LPM0)}$ | Delay time (see Note 1) | $V_{CC} = 2.2\text{ V}/3\text{ V}$                            |     | 100 |     | ns   |               |
| $t_{(LPM2)}$ |                         | $V_{CC} = 2.2\text{ V}/3\text{ V}$                            |     | 100 |     |      |               |
| $t_{(LPM3)}$ |                         | $f_{(MCLK)} = 1\text{ MHz}, V_{CC} = 2.2\text{ V}/3\text{ V}$ |     |     |     | 6    | $\mu\text{s}$ |
|              |                         | $f_{(MCLK)} = 2\text{ MHz}, V_{CC} = 2.2\text{ V}/3\text{ V}$ |     |     |     | 6    |               |
|              |                         | $f_{(MCLK)} = 3\text{ MHz}, V_{CC} = 2.2\text{ V}/3\text{ V}$ |     |     |     | 6    |               |
| $t_{(LPM4)}$ |                         | $f_{(MCLK)} = 1\text{ MHz}, V_{CC} = 2.2\text{ V}/3\text{ V}$ |     |     |     | 6    | $\mu\text{s}$ |
|              |                         | $f_{(MCLK)} = 2\text{ MHz}, V_{CC} = 2.2\text{ V}/3\text{ V}$ |     |     |     | 6    |               |
|              |                         | $f_{(MCLK)} = 3\text{ MHz}, V_{CC} = 2.2\text{ V}/3\text{ V}$ |     |     |     | 6    |               |

NOTE 1: Parameter applicable only if DCOCLK is used for MCLK.

**RAM**

| PARAMETER    |                         | MIN | NOM | MAX | UNIT |
|--------------|-------------------------|-----|-----|-----|------|
| $V_{(RAMh)}$ | CPU halted (see Note 1) | 1.6 |     |     | V    |

NOTE 1: This parameter defines the minimum supply voltage  $V_{CC}$  when the data in the program memory RAM remains unchanged. No program execution should happen during this supply voltage condition.

|  |   |  | 3 V       | 0.9  | 1.5                | 2.6  |    |

- NOTES: 1. The leakage current for the Comparator\_A terminals is identical to I<sub>lkg(Px.x)</sub> specification.  
2. The input offset voltage can be cancelled by using the CAEX bit to invert the Comparator\_A inputs on successive measurements. The two successive measurements are then summed together.

## PUC/POR

| PARAMETER          | TEST CONDITIONS  | MIN                          | TYP | MAX | UNIT    |   |
|--------------------|--|------------------------------|-----|-----|---------|---|
| $t_{(POR\_Delay)}$ | Internal time delay to release POR                                     |                              | 150 | 250 | $\mu s$ |   |
| $V_{POR}$          | $V_{CC}$ threshold at which POR release delay time begins (see Note 1) | $T_A = -40^\circ C$          |     | 1.4 | 1.8     | V |
|                    |  | $T_A = 25^\circ C$           |     | 1.1 | 1.5     | V |
|                    |  | $T_A = 85^\circ C$           |     | 0.8 | 1.2     | V |
| $V_{(min)}$        | $V_{CC}$ threshold required to generate a POR (see Note 2)             | $V_{CC}  dV/dt  \geq 1V/ms$  |     | 0.2 | V       |   |
| $t_{(reset)}$      | $\overline{RST}/NMI$ low time for PUC/POR                              | Reset is accepted internally |     | 2   | $\mu s$ |   |

NOTES: 1.  $V_{CC}$  rise time  $dV/dt \geq 1V/ms$ .

2. When driving  $V_{CC}$  low in order to generate a POR condition,  $V_{CC}$  should be driven to 200mV or lower with a  $dV/dt$  equal to or less than  $-1V/ms$ . The corresponding rising  $V_{CC}$  must also meet the  $dV/dt$  requirement equal to or greater than  $+1V/ms$ .

NOTES: 1. These parameters are not production tested.

Figure 12. DCO Characteristics

# MSP430x12x MIXED SIGNAL MICROCONTROLLER

SLAS312C – JULY 2001 – REVISED SEPTEMBER 2004

## electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

### main DCO characteristics

- Individual devices have a minimum and maximum operation frequency. The specified parameters for  $f_{(DCOx0)}$  to  $f_{(DCOx7)}$  are valid for all devices.
- All ranges selected by Rsel(n) overlap with Rsel(n+1): Rsel0 overlaps Rsel1, ... Rsel6 overlaps Rsel7.
- DCO control bits DCO0, DCO1, and DCO2 have a step size as defined by parameter  $S_{DCO}$ .
- Modulation control bits MOD0 to MOD4 select how often  $f_{(DCO+1)}$  is used within the period of 32 DCOCLK cycles. The frequency  $f_{(DCO)}$  is used for the remaining cycles. The frequency is an average equal to:

$$f_{average} = \frac{32 \times f_{(DCO)} \times f_{(DCO+1)}}{MOD \times f_{(DCO)} + (32 - MOD) \times f_{(DCO+1)}}$$

### DCO when using $R_{OSC}$ (see Note 1)

| PARAMETER   | TEST CONDITIONS  | V <sub>CC</sub> | MIN      | NOM | MAX | UNIT |
|---|--|-----------------|----------|-----|-----|------|
| f <sub>DCO</sub> , DCO output frequency               | R <sub>sel</sub> = 4, DCO = 3, MOD = 0, DCOR = 1,<br>T <sub>A</sub> = 25°C | 2.2 V           | 1.8±15%  |     |     | MHz  |
|   |  | 3 V             | 1.95±15% |     |     | MHz  |
| D <sub>t</sub> , Temperature drift                    | R <sub>sel</sub> = 4, DCO = 3, MOD = 0, DCOR = 1                           | 2.2 V/3 V       | ±0.1     |     |     | %/°C |
| D <sub>v</sub> , Drift with V <sub>CC</sub> variation | R <sub>sel</sub> = 4, DCO = 3, MOD = 0, DCOR = 1                           | 2.2 V/3 V       | 10       |     |     | %/V  |

NOTES: 1.  $R_{OSC}$  = 100kΩ. Metal film resistor, type 0257. 0.6 watt with 1% tolerance and  $T_K = \pm 50$ ppm/°C.

### crystal oscillator, LFXT1

| PARAMETER                            | TEST CONDITIONS   | MIN                 | TYP | MAX                 | UNIT |
|--------------------------------------|---|---------------------|-----|---------------------|------|
| C <sub>XIN</sub> Input capacitance   | XTS=0; LF mode selected.<br>V <sub>CC</sub> = 2.2 V / 3 V               | 12                  |     |                     | pF   |
|                                      | XTS=1; XT1 mode selected.<br>V <sub>CC</sub> = 2.2 V / 3 V (see Note 1) | 2                   |     |                     |      |
| C <sub>XOUT</sub> Output capacitance | XTS=0; LF mode selected.<br>V <sub>CC</sub> = 2.2 V / 3 V               | 12                  |     |                     | pF   |
|                                      | XTS=1; XT1 mode selected.<br>V <sub>CC</sub> = 2.2 V / 3 V (see Note 1) | 2                   |     |                     |      |
| V <sub>IL</sub>                      | Input levels at XIN<br>V <sub>CC</sub> = 2.2 V/3 V (see Note 2)         | V <sub>SS</sub>     |     | 0.2×V <sub>CC</sub> | V    |
| V <sub>IH</sub>                      |   | 0.8×V <sub>CC</sub> |     | V <sub>CC</sub>     |      |

NOTES: 1. Requires external capacitors at both terminals. Values are specified by crystal manufacturers.  
2. Applies only when using an external logic-level clock source. Not applicable when using a crystal or resonator.

**electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)**

**Flash Memory**

| PARAMETER                  |   | TEST CONDITIONS       | V <sub>CC</sub> | MIN             | NOM             | MAX | UNIT             |

| t <sub>CPT</sub>           | Cumulative program time                             | see Note 1            | 2.7 V/ 3.6 V    |                 |                 | 4   | ms               |
| t <sub>CMErase</sub>       | Cumulative mass erase time                          | see Note 2            | 2.7 V/ 3.6 V    | 200             |                 |     | ms               |
|                            | Program/Erase endurance                             |                       |                 | 10 <sup>4</sup> | 10 <sup>5</sup> |     | cycles           |
| t <sub>Retention</sub>     | Data retention duration                             | T <sub>J</sub> = 25°C |                 | 100             |                 |     | years            |
| t <sub>Word</sub>          | Word or byte program time                           | see Note 3            |                 |                 | 35              |     | t <sub>FTG</sub> |
| t <sub>Block, 0</sub>      | Block program time for 1 <sup>st</sup> byte or word |                       |                 |                 | 30              |     |                  |
| t <sub>Block, 1-63</sub>   | Block program time for each additional byte or word |                       |                 |                 | 21              |     |                  |
| t <sub>Block, End</sub>    | Block program end-sequence wait time                |                       |                 |                 | 6               |     |                  |
| t <sub>Mass Erase</sub>    | Mass erase time                                     |                       |                 |                 | 5297            |     |                  |
| t <sub>Seq Erase</sub>     | Segment erase time                                  |                       |                 |                 | 4819            |     |                  |

- NOTES: 1. The cumulative program time must not be exceeded when writing to a 64-byte flash block. This parameter applies to all programming methods: individual word/byte write and block write modes.  
 2. The mass erase duration generated by the flash timing generator is at least 11.1ms ( = 5297x1/f<sub>FTG,max</sub> = 5297x1/476kHz). To achieve the required cumulative mass erase time the Flash Controller's mass erase operation can be repeated until this time is met. (A worst case minimum of 19 cycles are required).  
 3. These values are hardwired into the Flash Controller's state machine; t<sub>FTG</sub> = 1/f<sub>FTG</sub>.

**JTAG Interface**

| PARAMETER             |                                       | TEST CONDITIONS | V <sub>CC</sub> | MIN | NOM | MAX | UNIT |
|-----------------------|---------------------------------------|-----------------|-----------------|-----|-----|-----|------|
| f <sub>TCK</sub>      | TCK input frequency                   | see Note 1      | 2.2 V           | 0   |     | 5   | MHz  |
|                       |                                       |                 | 3 V             | 0   |     | 10  | MHz  |
| R <sub>Internal</sub> | Internal pull-down resistance on TEST | see Note 2      | 2.2 V/ 3 V      | 25  | 60  | 90  | kΩ   |

- NOTES: 1. f<sub>TCK</sub> may be restricted to meet the timing requirements of the module selected.  
 2. TEST pull-down resistor implemented in all versions.

**JTAG Fuse (see Note 1)**

| PARAMETER           |   | TEST CONDITIONS       | V <sub>CC</sub> | MIN | NOM | MAX | UNIT |
|---------------------|---|-----------------------|-----------------|-----|-----|-----|------|
| V <sub>CC(FB)</sub> | Supply voltage during fuse-blow condition | T <sub>A</sub> = 25°C |                 | 2.5 |     |     | V    |
| V <sub>FB</sub>     | Voltage level on TEST for fuse-blow       |                       |                 | 6   |     | 7   | V    |
| I <sub>FB</sub>     | Supply current into TEST during fuse blow |                       |                 |     |     | 100 | mA   |
| t <sub>FB</sub>     | Time to blow fuse                         |                       |                 |     |     | 1   | ms   |

- NOTES: 1. Once the fuse is blown, no further access to the MSP430 JTAG/Test and emulation features is possible. The JTAG block is switched to bypass mode.

<sup>†</sup> Output from USART0 module

<sup>‡</sup> Input to USART0 module

#### port P3, P3.1, input/output with Schmitt-trigger

APPLICATION INFORMATION

input/output schematic (continued)

port P3, P3.2, input/output with Schmitt-trigger

port P3, P3.3, input/output with Schmitt-trigger

NOTE: UART mode: The UART clock can only be an input. If UART mode and UART function are selected, the P3.3/UCLK0 is always an input.  
 SPI, slave mode: The clock applied to UCLK0 is used to shift data in and out.  
 SPI, master mode: The clock to shift data in and out is supplied to connected devices on pin P3.3/UCLK0 (in slave mode).

## APPLICATION INFORMATION

### JTAG fuse check mode

MSP430 devices that have the fuse on the TEST terminal have a fuse check mode that tests the continuity of the fuse the first time the JTAG port is accessed after a power-on reset (POR). When activated, a fuse check current, a fuse check current,  $I_{TF}$ , of 1 mA at 3 V, 2.5 mA at 5 V can flow from from the TEST pin to ground if the fuse is not burned. Care must be taken to avoid accidentally activating the fuse check mode and increasing overall system power consumption.

When the TEST pin is taken back low after a test or programming session, the fuse check mode and sense currents are terminated.

Activation of the fuse check mode occurs with the first negative edge on the TMS pin after power up or if the TMS is being held low during power up. The second positive edge on the TMS pin deactivates the fuse check mode. After deactivation, the fuse check mode remains inactive until another POR occurs. After each POR the fuse check mode has the potential to be activated.

The fuse check current will only flow when the fuse check mode is active and the TMS pin is in a low state (see Figure 13). Therefore, the additional current flow can be prevented by holding the TMS pin high (default condition).

Figure 13. Fuse Check Mode Current, MSP430F12x

#### NOTE:

The CODE and RAM data protection is ensured if the JTAG fuse is blown and the 256-bit bootloader access key is used. Also see the *bootstrap loader* section for more information.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

---

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - This drawing is subject to change without notice.
  - QFN (Quad Flatpack No-Lead) Package configuration.
  - The package thermal pad must be soldered to the board for thermal and mechanical performance.
  - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
  - Falls within JEDEC MO-220.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

NOTE: A. All linear dimensions are in millimeters

RHB (S-PVQFN-N32)

PLASTIC QUAD FLATPACK NO-LEAD

4207808-2/Q 06/13

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Customers should contact their board fabrication site for recommended solder mask tolerances and via tenting recommendations for vias placed in the thermal pad.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
