TS3USBA225 USB 2.0 High-Speed (480 Mbps) and Audio Switches with Negative Signal Capability and 1.8-V Logic Compatibility and Power-Down Mode

1 Features

- 2.7-V to 5.0-V Operating Power Supply (VCC)
- MHL/High-Speed USB (480 Mbps) Switch:
  - V I/O Accepts Signals up to 4.5 V (Independent of VCC)
  - 6.5 Ω r_{ON} Typical
  - 3 pF C_{ON} Typical
  - 1.9 GHz Bandwidth (–3 dB)
- Audio Switch:
  - 2.5 Ω r_{ON} Typical
  - Negative Rail Capability down to –1.8 V
  - Low THD: < 0.05%
  - Internal Shunt Resistors for Click-and-Pop Reduction
- 1.8-V Compatible Control Input (SEL1 and SEL2) Threshold
- Minimized Current Consumption (~5 µA) in Power-Down Mode
- Power-Off Protection: All I/O Pins are High-Z when V_{CC}= 0 V
- 12-Pin QFN Package (2 mm × 1.7 mm, 0.4 mm Pitch)
- ESD Performance Tested per JESD 22
  - 2000 V Human-Body Model (A114-B, Class II)
  - 1000 V Charged-Device Model (C101)

2 Applications

- Cell phones and Smartphones
- Tablet PCs
- Portable Instrumentation
- Digital Still Cameras
- Portable Navigation Devices (GPS)
- USB 2.0, MIPI (CSI/DSI), LVDS Switching

3 Description

The TS3USBA225 is a 2-channel single-pole triple-throw (SP3T) multiplexer that supports USB 2.0 High-Speed (480 Mbps) signals in all 3 differential channels. The first two high-speed differential channels also support Mobile High Definition Link (MHL) signaling with resolution and video frame rates up to 720p, 60 fps and 1080i, 30 fps. The remaining differential channel can also be used as an audio switch that is designed to allow analog audio signals to swing negatively. This configuration allows the system designer to use a common connector for audio and USB 2.0 or MHL data.

The TS3USBA225 has a V_{CC} range of 2.7 V to 5.0 V with the capability to pass true-ground audio signals down to –1.8 V. The device also supports a power-down mode that can be enabled when both SEL1 and SEL2 controls are low to minimize current consumption when no signal is transmitting. The TS3USBA225 also features internal shunt resistors on the audio path to reduce clicks and pops that may be heard when the audio switches are selected.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS3USBA225	UQFN (12)	2.00 mm × 1.70 mm

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision B (July 2012) to Revision C — **Page**

- Added *Device Information* table, *ESD Ratings* table, *Thermal Information* table, *Detailed Description* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section. ... 1
- Correct typographical errors to align datasheet information. ... 1
- Changed "Negative Rail Capability -1.8 V to VCC" to "Negative Rail Capability down to -1.8 V" in Features. ... 1
- Updated *Recommended Operating Conditions* table. ... 5
- Updated *Typical Characteristics* graphs. ... 9

Changes from Revision A (April 2012) to Revision B — **Page**

- Updated Application Block Diagrams. ... 1
- Updated MIN value in the Absolute Maximum Ratings table for V_R, V_L. ... 4
- Updated MIN value in the *Recommended Operating Conditions* table for V_R, V_L. ... 5

Changes from Original (October 2011) to Revision A — **Page**

- Added MHL specification to datasheet. ... 1
- Updated Application Block Diagrams. ... 1
- Added MHL Eye Pattern graphics. ... 13

6 Specifications

6.1 Absolute Maximum Ratings[(1)(2)(3)]

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage		–0.3	6.0	V
V_{D0+}, V_{D0-}, V_{D1+}, V_{D1-}	High speed differential signal voltage		–0.3	4.6	V
V_R, V_L	Audio signal voltage		– 1.9	4.6	V
I_K	Analog port diode current	$V_{I/O+}$,$V_{I/O-}$ < 0	–50		mA
V_I	Digital input voltage (SEL1, SEL2)		–0.3	6.0	V
I_{IK}	Digital logic input clamp current[(3)]	V_I < 0	–50		
I_{CC}	Continuous current through VCC			100	mA
I_{GND}	Continuous current through GND		–100		mA
T_{stg}	Storage temperature		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.
(3) All voltages are with respect to ground, unless otherwise specified.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001[(1)]	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101[(2)]	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

6.3 Recommended Operating Conditions

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		2.7	5.0	V
V_{D0+}, V_{D0-}, V_{D1+}, V_{D1-}	High speed differential signal voltage range		0	4.5	V
V_R, V_L	Audio signal voltage range when not in power-down mode		–1.8	4.3 V or V_{CC} (1)	V
	Audio signal voltage range when in power-down mode		–1	1	
I_K	Analog port diode current	$V_{I/O+}$, $V_{I/O-}$ < 0	–50		mA
V_I	Digital input voltage range (SEL1, SEL2)		0	V_{CC}	V
T_A	Operating free-air temperature		–40	85	°C

(1) This rating is exclusive and the voltage on the pins must not exceed either 4.3 V or V_{CC}. E.g. if V_{CC} = 3.3 V the voltage on the pin must not exceed 3.3 V and if V_{CC} is = 5.0 V the voltage on the pin must not exceed 4.3 V.

6.4 Thermal Information

THERMAL METRIC (1)		TS3USBA225 RUT (UQFN) 12 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	118.6	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	45.1	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	47.9	°C/W
ψ_{JT}	Junction-to-top characterization parameter	0.7	°C/W
ψ_{JB}	Junction-to-board characterization parameter	47.9	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, SPRA953.

6.5 Electrical Characteristics

T_A = –40°C to 85°C, typical values are at V_{CC} = 3.3 V, T_A = 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
MHL/USB SWITCH							
r_{on}	ON-state resistance	V_{CC} = 3.0 V	$V_{I/O+,I/O-}$ = 0.4 V, I_{ON} = 15 mA		6.5	7.5	Ω
Δr_{on}	ON-state resistance match between channels	V_{CC} = 3.0 V	$V_{I/O+,I/O-}$ = 1.7 V, I_{ON} = 15 mA		0.1		Ω

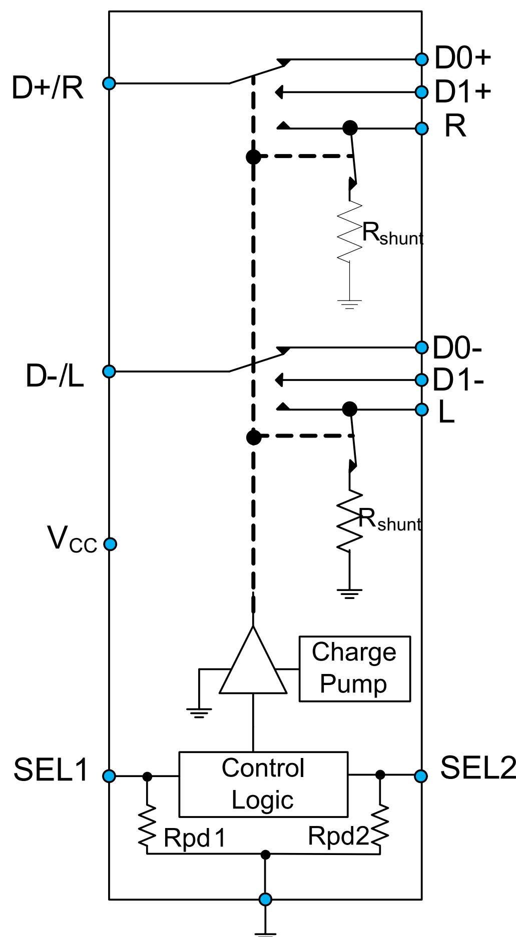
7 Detailed Description

7.1 Overview

The TS3USBA225 is a 2-channel single-pole triple-throw (SP3T) multiplexer that supports USB 2.0 High-Speed (480 Mbps) signals in all 3 differential channels. The first two high-speed differential channels also support Mobile High Definition Link (MHL) signaling with video resolution and frame rates up to 720p, 60 fps and 1080i, 30 fps. The remaining differential channel can also be used as an audio switch that is designed to allow analog audio signals to swing negatively. This configuration allows the system designer to use a common connector for audio and USB 2.0 or MHL data.

The TS3USBA225 has a V_{CC} range of 2.7 V to 5.0 V with the capability to pass true-ground audio signals down to –1.8 V. The device also supports a power-down mode that can be enabled when both SEL controls are low to minimize current consumption when no signal is transmitting. The TS3USBA225 also features internal shunt resistors on the audio path to reduce clicks and pops that may be heard when the audio switches are selected.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 Click and Pop Reduction

The shunt resistors in the TS3USBA225 automatically discharge any capacitance at the L and R terminals when they are not connected to the common D-/L and D+/R paths. This reduces the audible click-and-pop sounds that occur when switching between audio sources. Audible clicks and pops are caused when a step DC voltage is switched into the speaker. By automatically discharging the side that is not connected, any residual DC voltage is removed, thereby reducing the clicks and pops.

Copyright © 2011–2015, Texas Instruments Incorporated

Feature Description (continued)

7.3.2 Negative Signal Swing Capability

The TS3USBA225 has an analog audio path L and R that can support negative signals that pass below ground without distortion. These analog switches operate from –1.8 V to 4.3 V.

7.4 Device Functional Modes

7.4.1 High Impedance (Hi-Z) Mode

The TS3USBA225 has a Hi-Z mode that places the device's signal paths in a high impedance state when there is no power supplied to the TS3USBA225 V_{CC} pin. This mode will isolate the signal bus in a powered off situation so that it may not interfere with other devices that maybe sharing the bus.

7.4.1.1 Power-Down Mode

The TS3USBA225 has a power-down mode that reduces the power consumption to 3 µA when the device is not in use. To put the device in power-down mode and disable the switch, the SEL1 and SEL2 pins must be supplied with a logic low signal.

7.4.2 Device Functional Modes

Table 1 is the function table for the TS3USBA225.

Table 1. Function Table

SEL1	SEL2	V_{CC}	L,R	D0+, D0-	D1+, D1-	MODE
X	X	L	OFF	OFF	OFF	Hi-Z Mode
L	L	H	OFF	OFF	OFF	Power-Down Mode
L	H	H	OFF (1)	ON	OFF	MHL/USB Mode 1
H	L	H	ON	OFF	OFF	USB/Audio Mode
H	H	H	OFF (1)	OFF	ON	MHL/USB Mode 2

(1) 100 Ω shunt resistors are enabled in this state.

8 Application and Implementation

NOTE
Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TS3USBA225 is typically used to route signals from one USB connector to multiple signal paths in a system including an analog audio/negative signal path. All signal paths through the device are unbuffered bidirectional path which can represented by perfect 0 Ω impedance wire in an ideal case. All signal paths can handle USB 2.0 signals but the L and R paths are the only paths that can support a negative signal.

8.2 Typical Application

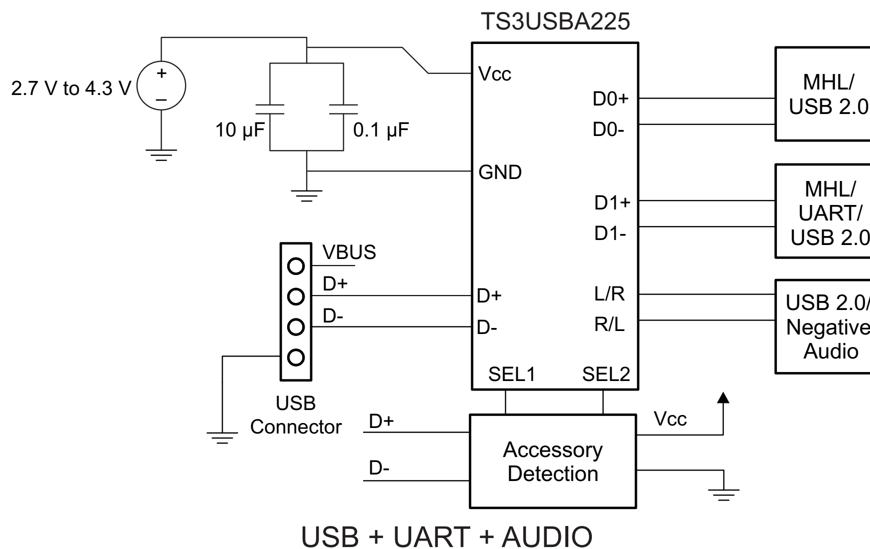

Figure 13. Application Block Diagram

8.2.1 Design Requirements

Design requirements of the USB 1.0, 1.1, and 2.0 standards should be followed.

TI recommends that the digital control pins SEL1 and SEL2 be pulled up to V_{CC} or down to GND to avoid undesired switch positions that could result from the floating logic pin.

8.2.2 Detailed Design Procedure

The TS3USB221 can be properly operated without any external components. However, it is recommended that unused pins should be connected to ground through a 50 Ω resistor to prevent signal reflections back into the device.

9 Power Supply Recommendations

Power to the device is supplied through the V_{CC} pin and should follow the USB 1.0, 1.1, and 2.0 standards. TI recommends placing a bypass capacitor as close as possible to the supply pin V_{CC} to help smooth out low frequency noise to provide better load regulation across the frequency spectrum.

10 Layout

10.1 Layout Guidelines

Place supply bypass capacitors as close to V_{CC} pin as possible and avoid placing the bypass caps near the D+/D– traces.

The high-speed D+/D– traces should always be matched lengths and must be no more than 4 inches; otherwise, the eye diagram performance may be degraded. A high-speed USB connection is made through a shielded, twisted pair cable with a differential characteristic impedance. In layout, the impedance of D+ and D– traces should match the cable characteristic differential impedance for optimal performance.

Route the high-speed USB signals using a minimum of vias and corners which will reduce signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the signal's transmission line and increases the chance of picking up interference from the other layers of the board. Take precaution when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.

Do not route USB traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices or IC's that use or duplicate clock signals.

Avoid stubs on the high-speed USB signals because they cause signal reflections. If a stub is unavoidable, then the stub should be less than 200 mm.

Route all high-speed USB signal traces over continuous planes (V_{CC} or GND), with no interruptions.

Avoid crossing over anti-etch, commonly found with plane splits.

Due to high frequencies associated with the USB, a printed circuit board with at least four layers is recommended; two signal layers separated by a ground and power layer as shown in Figure 20.

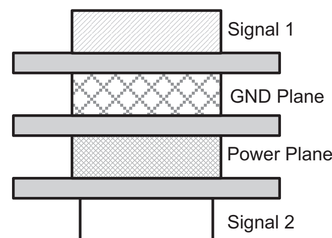

Figure 20. Four-Layer Board Stack-Up

The majority of signal traces should run on a single layer, preferably Signal 1. Immediately next to this layer should be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies. For more information on layout guidelines, see *High Speed Layout Guidelines* (SCAA082) and *USB 2.0 Board Design and Layout Guidelines* (SPRAAR7).

TS3USBA225RUTR	ACTIVE	UQFN	RUT	12	3000	Green (RoHS & no Sb/Br)	CU NIPDAU | CU NIPDAUAG	Level-1-260C-UNLIM	-40 to 85	(LQ7 ~ LQR)	Samples

[1] The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

[2] Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

[3] MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

[4] There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

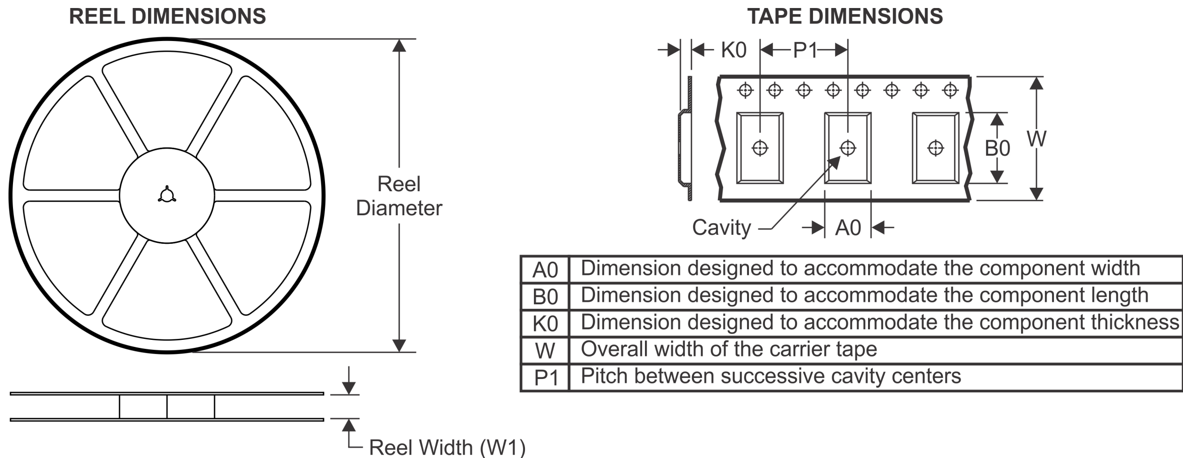
[5] Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

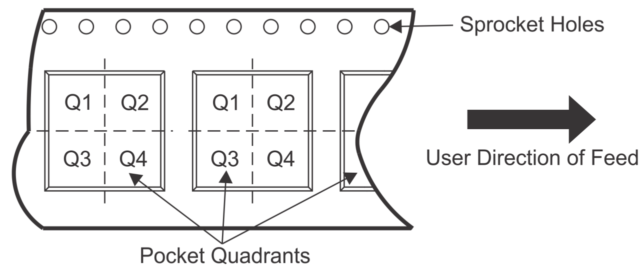
[6] Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

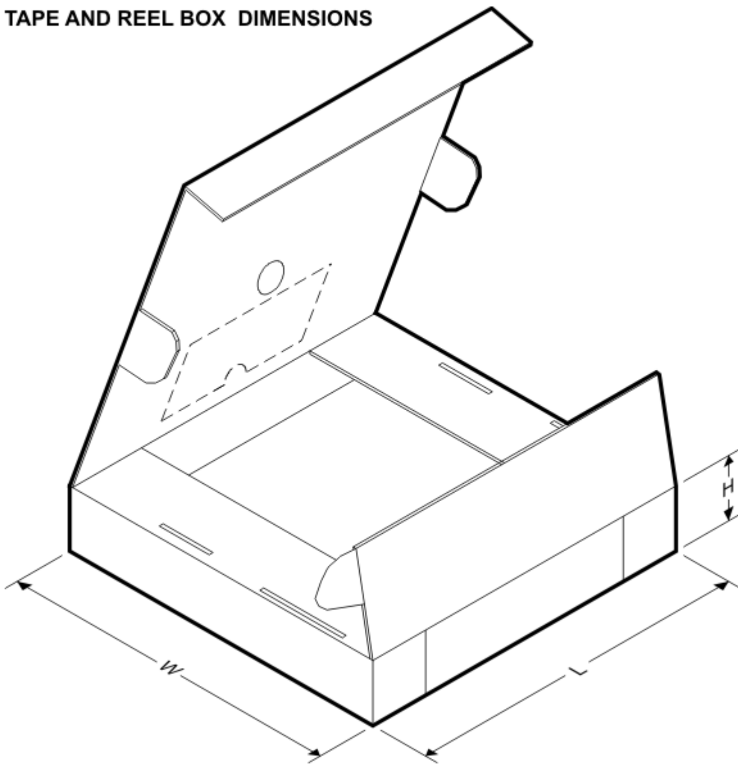




*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TS3USBA225RUTR	UQFN	RUT	12	3000	180.0	8.4	1.95	2.3	0.75	4.0	8.0	Q1
TS3USBA225RUTR	UQFN	RUT	12	3000	180.0	9.5	1.9	2.3	0.75	4.0	8.0	Q1

TAPE AND REEL BOX DIMENSIONS



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TS3USBA225RUTR	UQFN	RUT	12	3000	202.0	201.0	28.0

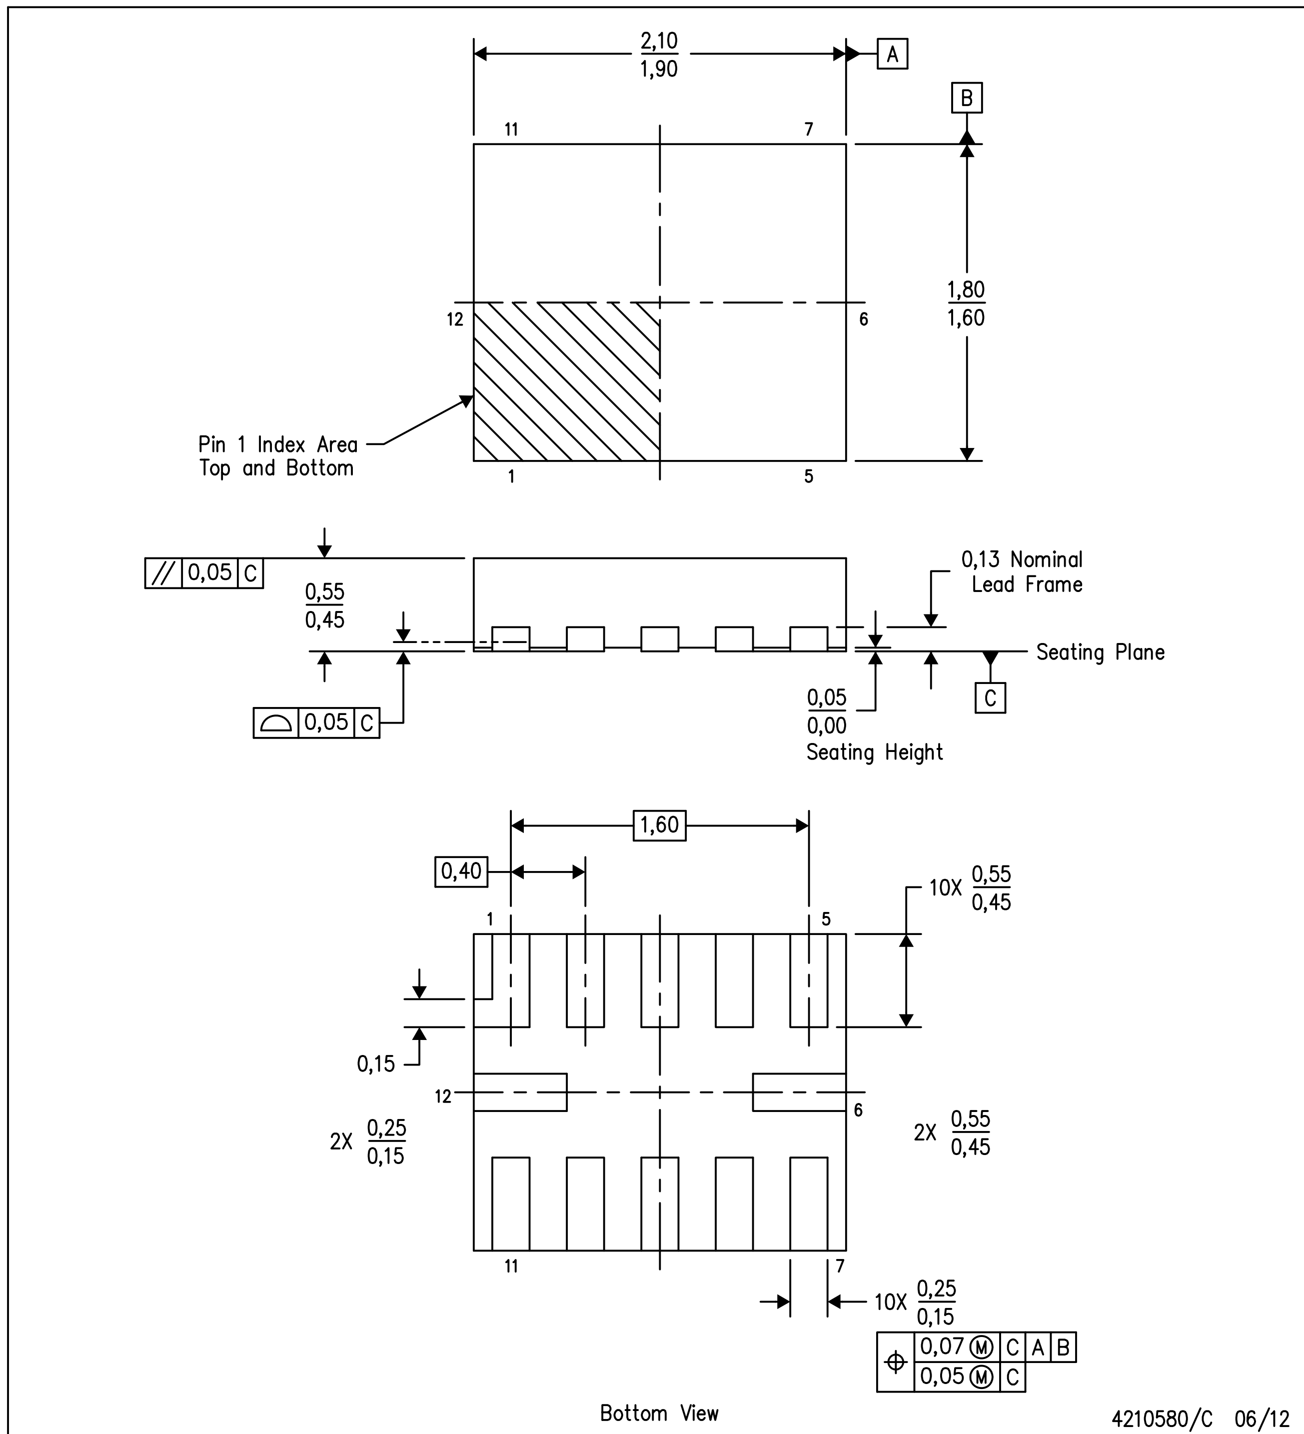
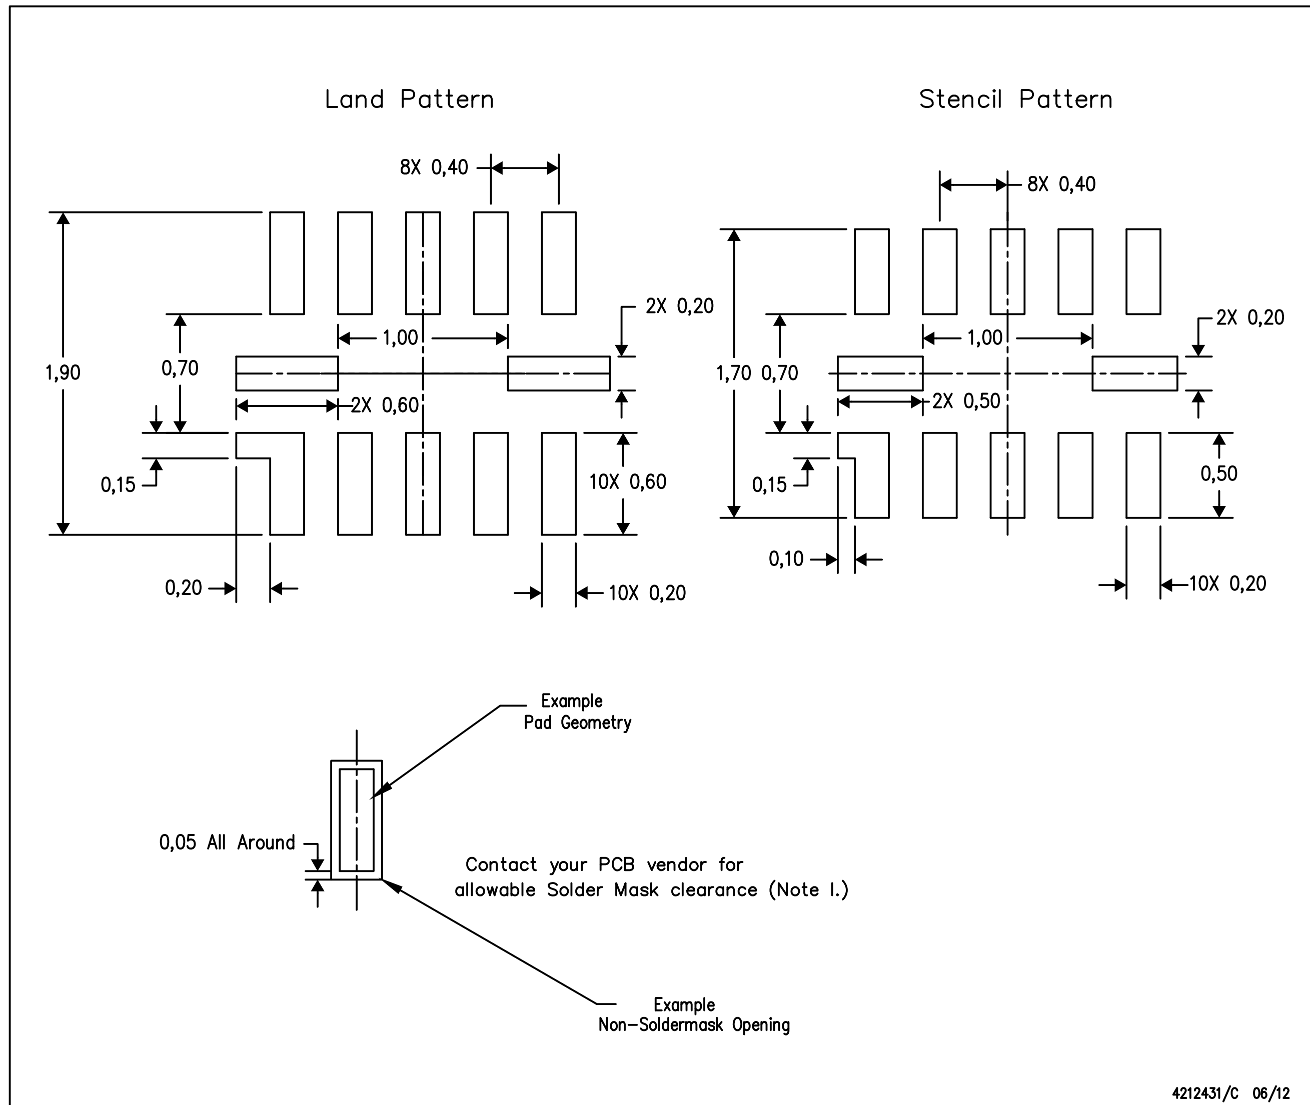
RUT (R-PUQFN-N12) PLASTIC QUAD FLATPACK NO-LEAD



NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
B. This drawing is subject to change without notice.
C. QFN (Quad Flatpack No-Lead) package configuration.

RUT (R-PUQFN-N12) PLASTIC QUAD FLATPACK NO-LEAD



NOTES:
- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
- E. Maximum stencil thickness 0,1016 mm (4 mils). All linear dimensions are in millimeters.
- F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
- G. Over-printing land for larger area ratio is not advised due to land width and bridging potential. Exersize extreme caution.
- H. Suggest stencils cut with lasers such as Fiber Laser that produce the greatest positional accuracy.
- I. Component placement force should be minimized to prevent excessive paste block deformation.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
